# NX10_Show specific Hidden lines via View Dependent Edit
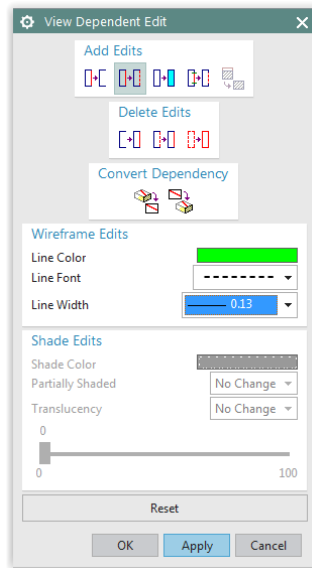

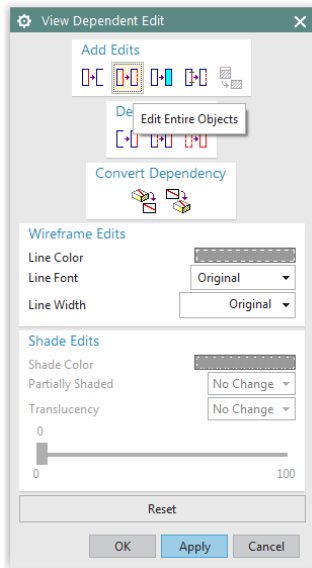

Sometimes it's useful to only show some specific Hidden lines in a view to make it clearer.

Default Hidden view --> all Hidden lines are shown

This can be done using View Dependent Edit :
  * Entire Objects
  * set Line Color, Line Font, ... --> Apply
  * select only the Hidden lines that need to stay visible

  * O.K.

To get rid of all other Hidden lines in the view, View Settings-Common-Hidden Lines-Hidden Lines active, only check :

  * "Process Hidden Lines"
  * "Show Referenced Edges Only"

Now only the Hidden lines via View Dependent Edits are visible.

Showing specific Hidden lines
