Known Installation Error 1406 – Issue with Macromedia Flash Player 8a

Early in the installation of Autodesk Inventor products, some customers may experience Error 1406:

Autodesk	Inventor Professional 11
1	Error 1406. Could not write value to key \Software\Classes\CLSID\{D27CDB6E-AE6D-11cf-96B8-444553540000}\Programmable. Verify that you have sufficient access to that key, or contact your support personnel.
	Cancel Retry Ignore

This error occurs if you have Macromedia Flash Player 8a installed on your system. Flash Player 8a was just recently released, so it is newer than version 8 that gets installed by Autodesk Inventor. You may already have version 8a without knowing.

You should uninstall Flash Player 8a before installing Autodesk Inventor. Since Autodesk Inventor automatically installs Flash Player 8 during installation, you will always have a working version of Flash Player. Future upgrades to Flash Player should not adversely affect your Autodesk Inventor environment.

Please complete the following if you encounter this error:

- 1. Cancel the installation of Autodesk Inventor
- 2. Close all Internet Explorer and other internet browsers
- Run C:\WINDOWS\system32\Macromed\Flash\UninstFl.exe to clean all Flash 8a registries
- 4. Remove Macromedia Flash Player 8 from Add/remove programs Note: Although Flash Player 8 is listed, this is really version 8a
- 5. Retry installation of Autodesk Inventor

If you are not successful in completing the above steps, please contact Product Support for further assistance.

Thank you, - Autodesk
