Check PHPlicensewatcher installation

This will check whether PHPlicensewatcher has been properly installed. This is not an exhaustive check but checks for common installation and configuration issues.

When the script is finished with the check it will print out a congratulation message. If there is no congratulatory message a problem appeared that this script didn't anticipate :-(.

> PHP version you are using **5.3.5** GOOD

Checking whether GD support (required for graphs) is installed

> **GOOD**. GD support is enabled.

Checking config file.

> Config File config.php is readable. I hope you have configured it correctly.

> Great PEAR Table class exists. GOOD

Verifying whether the Flexlm lmutil (**d:/ugs/lizenzserver/nx75/lmutil.exe**) is executable:

> **d:/ugs/lizenzserver/nx75/lmutil.exe** exists and is executable.

Verifying whether RRDtool is available:

> WARNING: RRDtool is not installed. If you want support please install RRDtool and set `$rrdtool_bin` and `$rrd_dir`.

Verifying whether the LUM i4blt (**/opt/lum/ls/bin/i4blt**) is executable:

> WARNING: /opt/lum/ls/bin/i4blt It is not executable or there is some kind of issue. This is not a fatal error, but you will not be able to monitor LUM Servers. Please fix the `$i4blt_loc` variable, check permissions or check whether file exists. (You can download a binary from http://www-306.ibm.com/software/awdtools/lum/component.html)

Checking DB connection:

> DB connect succeeded.

Congratulations all tests passed. This hopefully means :-) that PHPlicensewatcher is ready for use
