## 0 MY QUESTIONS

---

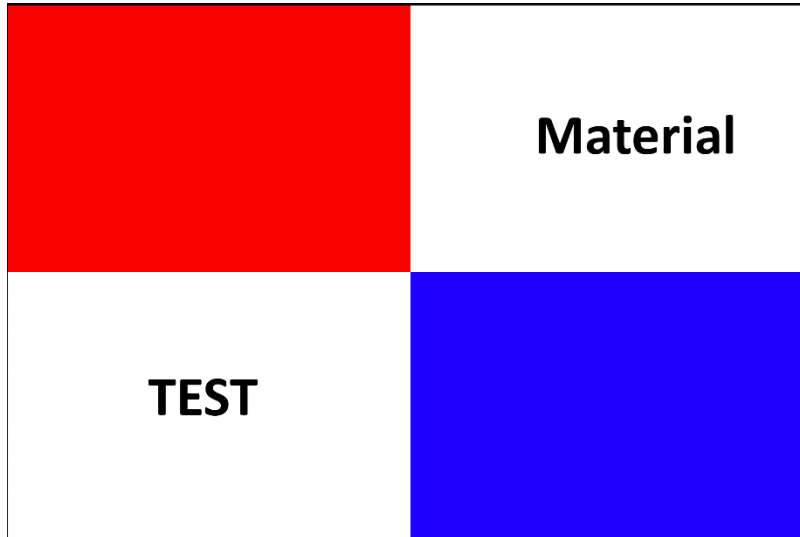

- a. **HOW SHOULD THE MATERIAL BEHAVIOUR FROM THE PERSPECTIVE OF AUTODESK BE?**
  - a. As in Revit?
  - b. As in Inventor?
  
- b. **WHY THE MATERIAL INFORMATION (MATERIAL NAME AND MATERIAL APPEARANCE) ARE USED DIFFERENTLY IN THE TWO PROGRAMS?**
  
- c. **WHY ARE THE DEMANDS ON THE MATERIAL LIBRARIES IN BOTH PROGRAMS DIFFERENTLY (PHYSICAL MATERIAL IN INVENTOR)?**
  
- d. **WHY ARE THE ORIGINS OF THE MATERIAL MAPS IN BOTH PROGRAMS DIFFERENT?**
  
- e. **WHY MATERIAL OUT OF INVENTOR WILL BE SHOWN WITHOUT A PREVIEW IN THE MATERIAL LIBRARY INSTEAD LIKE REVIT MATERIAL (WITH PREVIEW) ?**
  
- f. **WHY THE SCALE (SIZE) OF THE MAPS IS DIFFERENT IN BOTH PROGRAMS ? ( MM IN REVIT, CM IN INVENTOR )**

I would like to explain my Problems respectively the Behavior of the Materials in both programs Step by Step:

# 1 CREATING A MATERAIL MAP

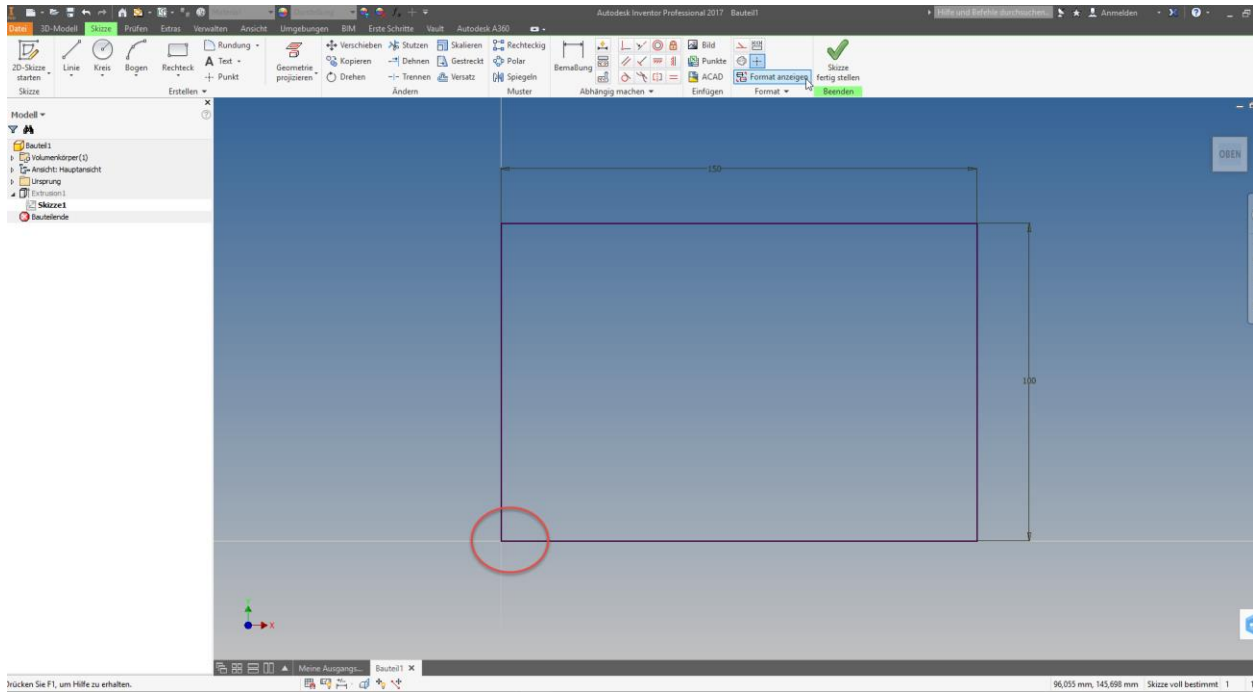

PNG 150x100mm, 150DPI

Photoshop

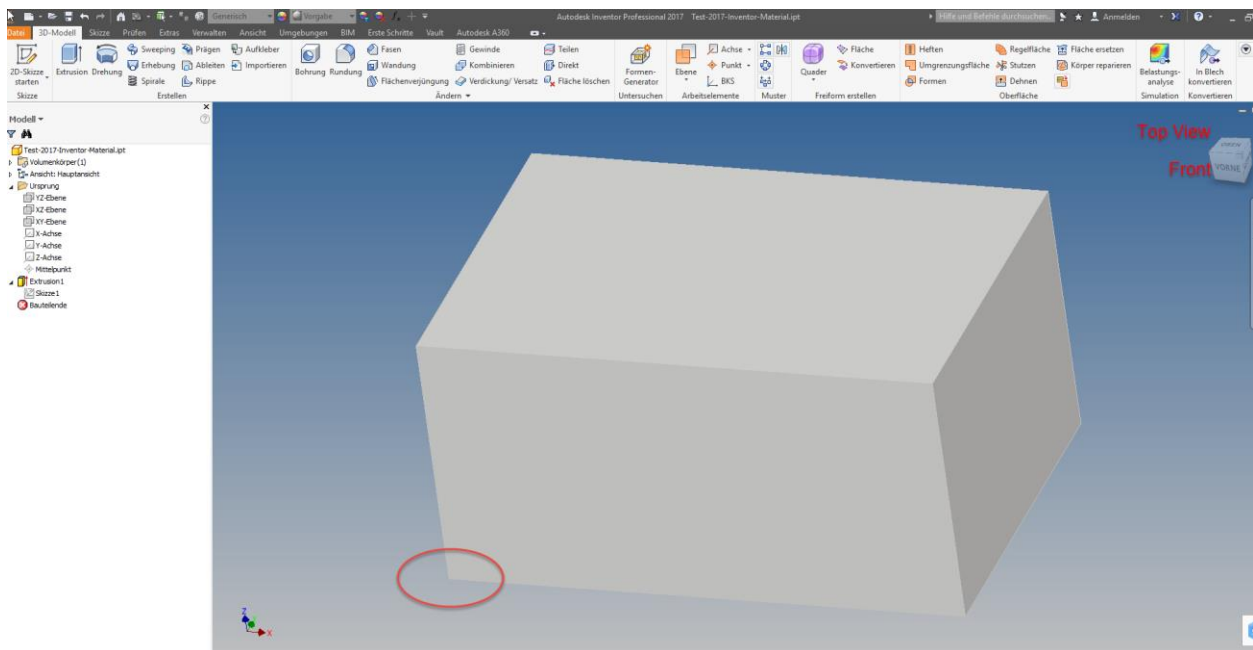

## 2 BUILD A NEW PART IN INVENTOR

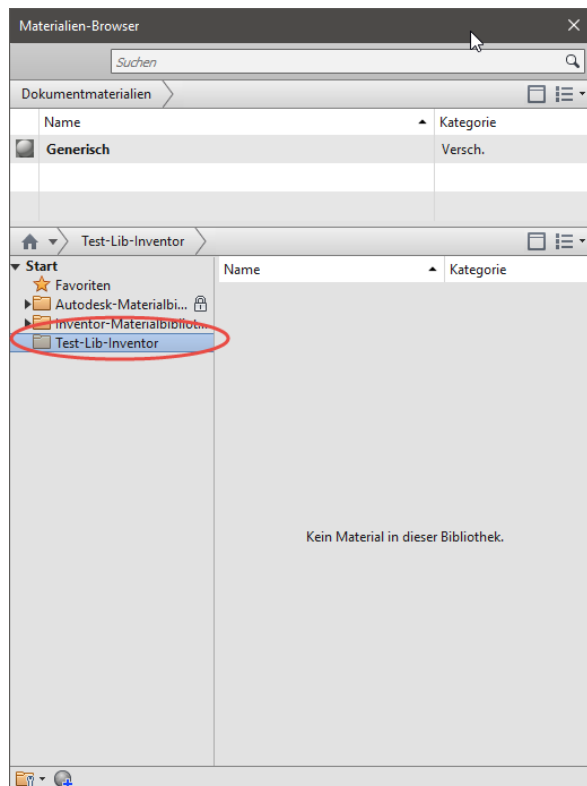

Inventor 2017  
Cube 150x100x75mm

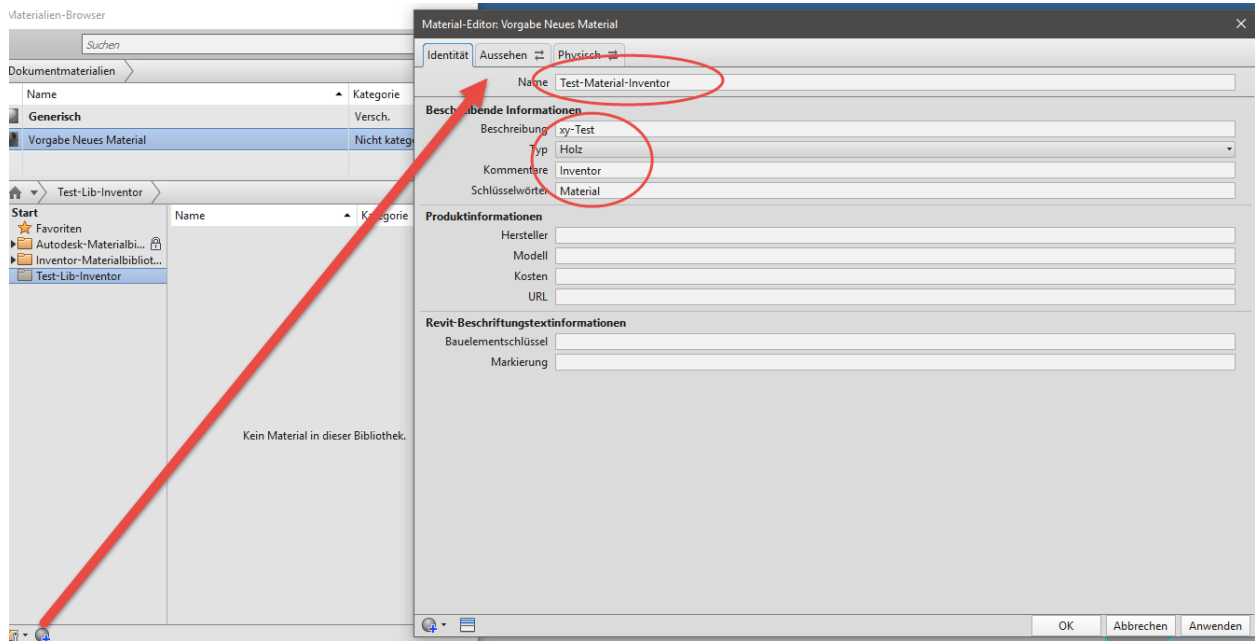

Sketch on xy-Plane (Top View), starting on 0,0, Extrusion 75mm

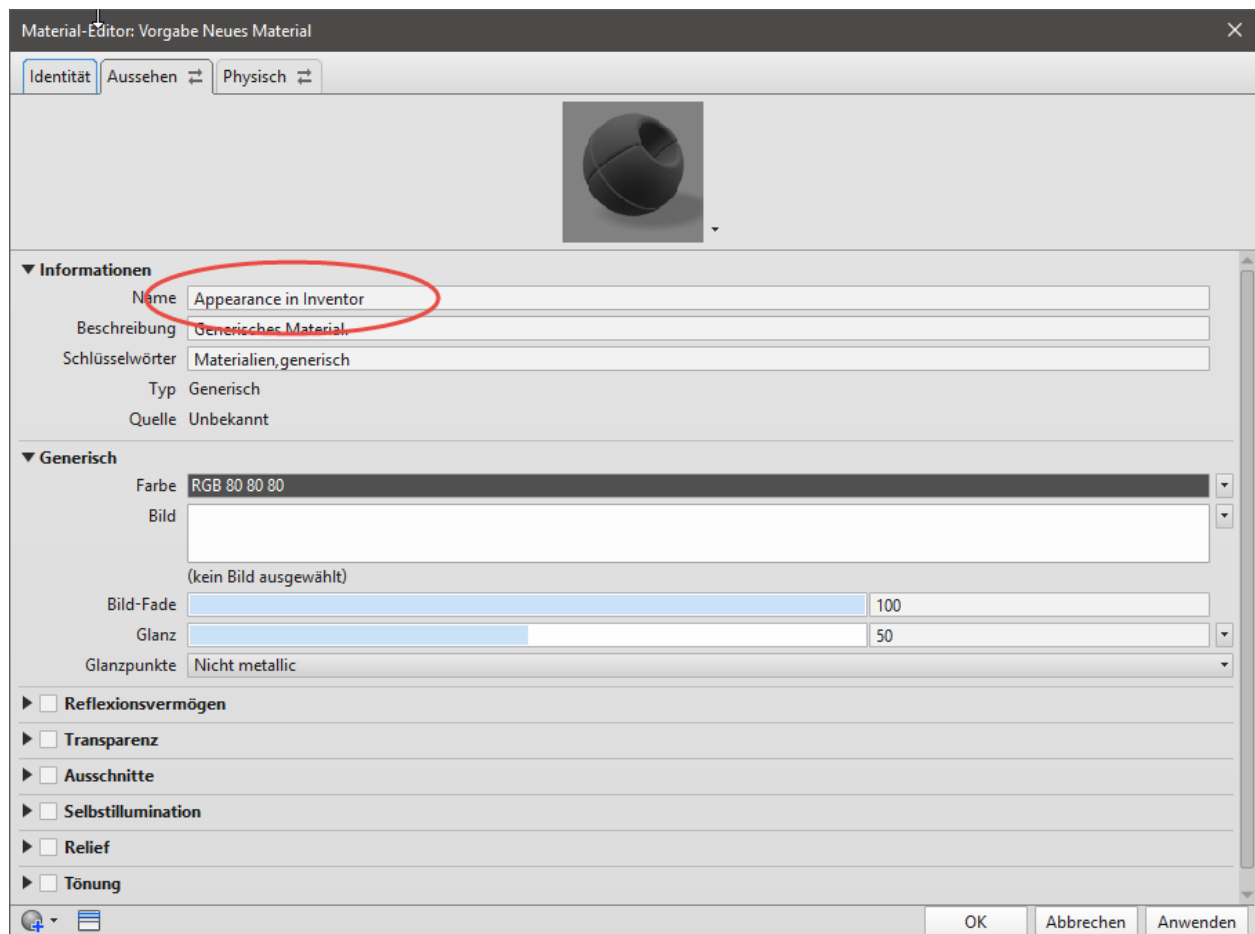

### 3 NEW MATERIAL LIBRARY

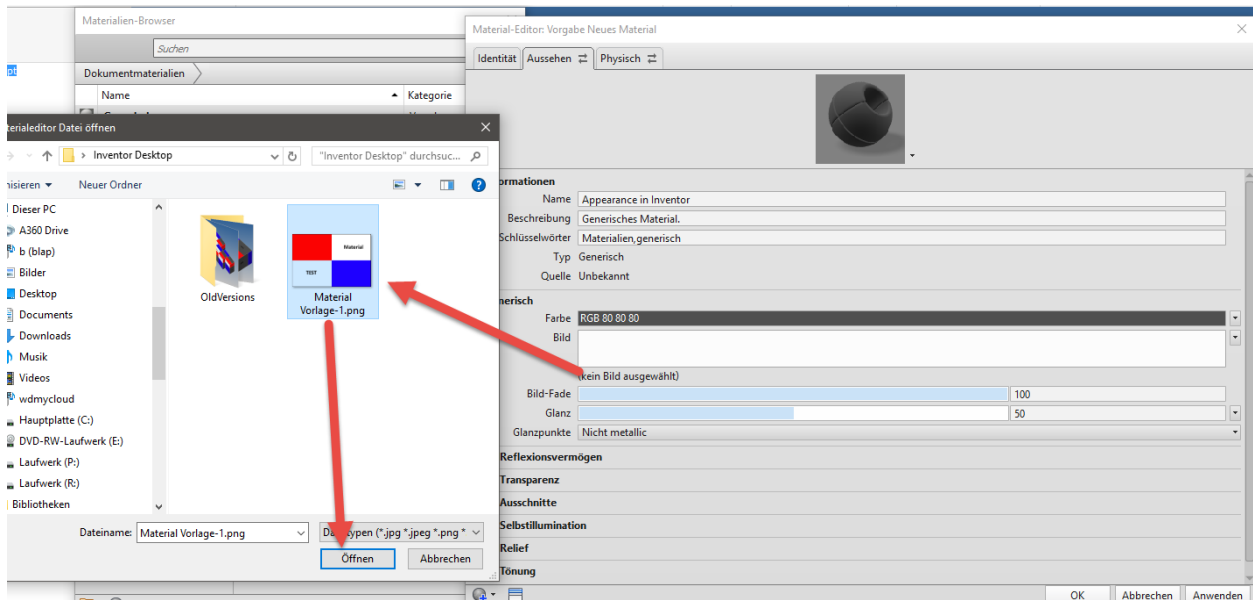

## 4 NEW MATERIAL

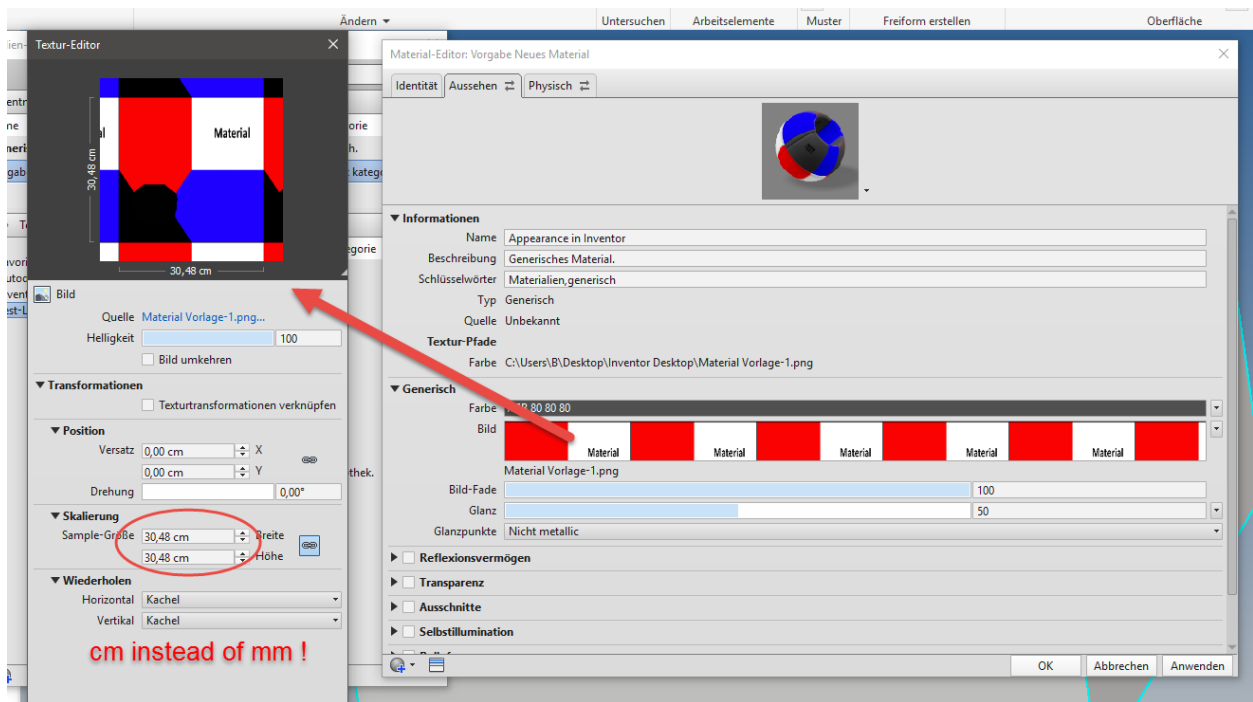

New Name, new Description etc. on Identity-Tab

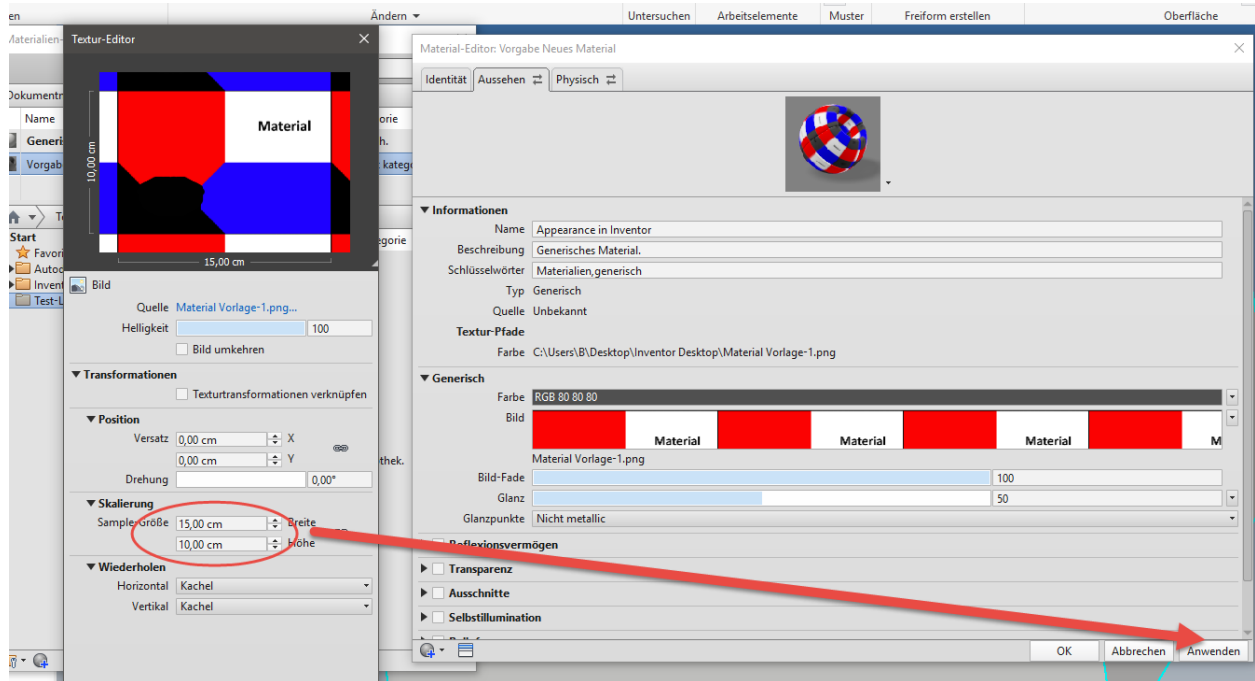

New Name on Appearance-Tab

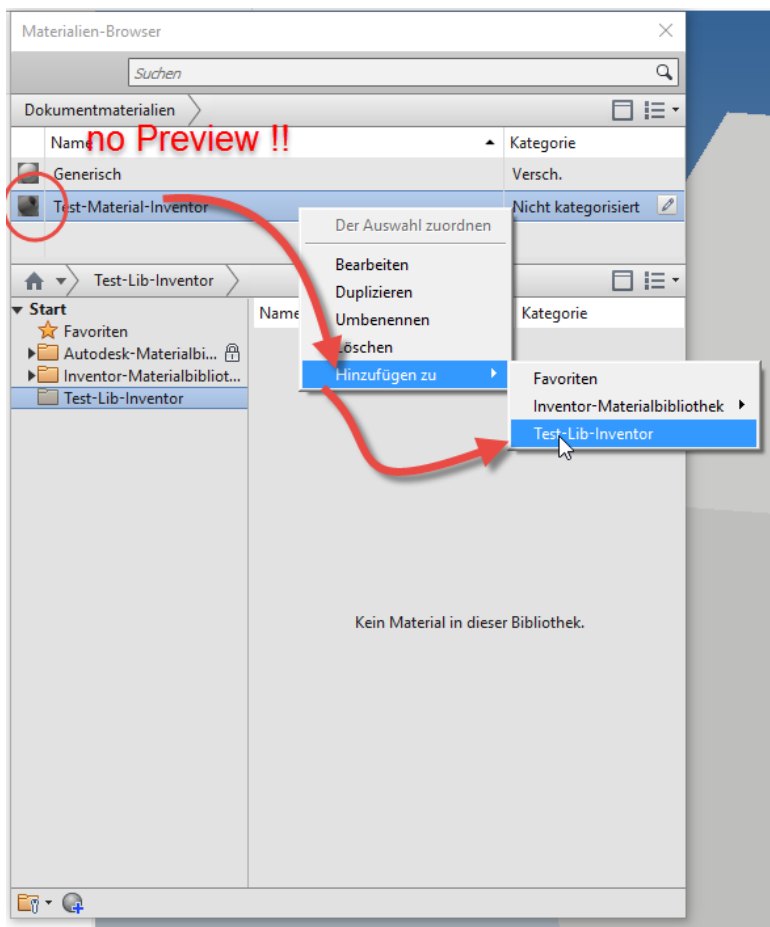

## New Bitmap

Size of Bitmap shown in cm instead of mm (Part Template is mm !!)

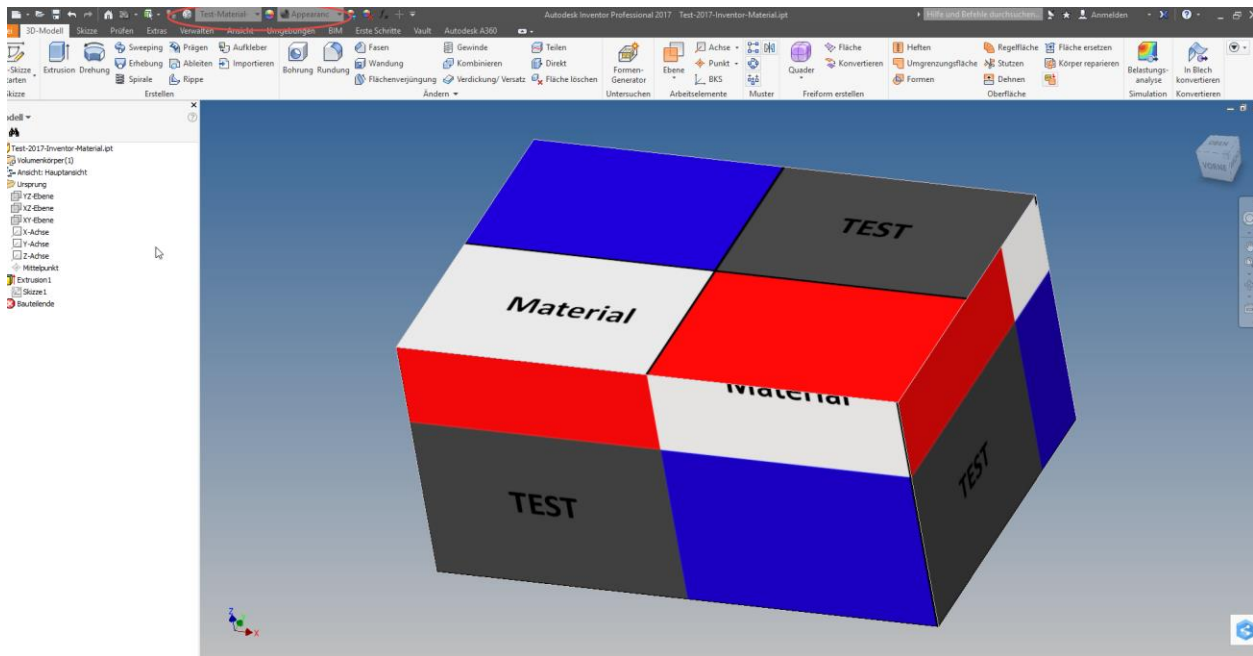

Size changed in 15x10cm

Export the Material into the new Library

(btw.: No Preview is shown)

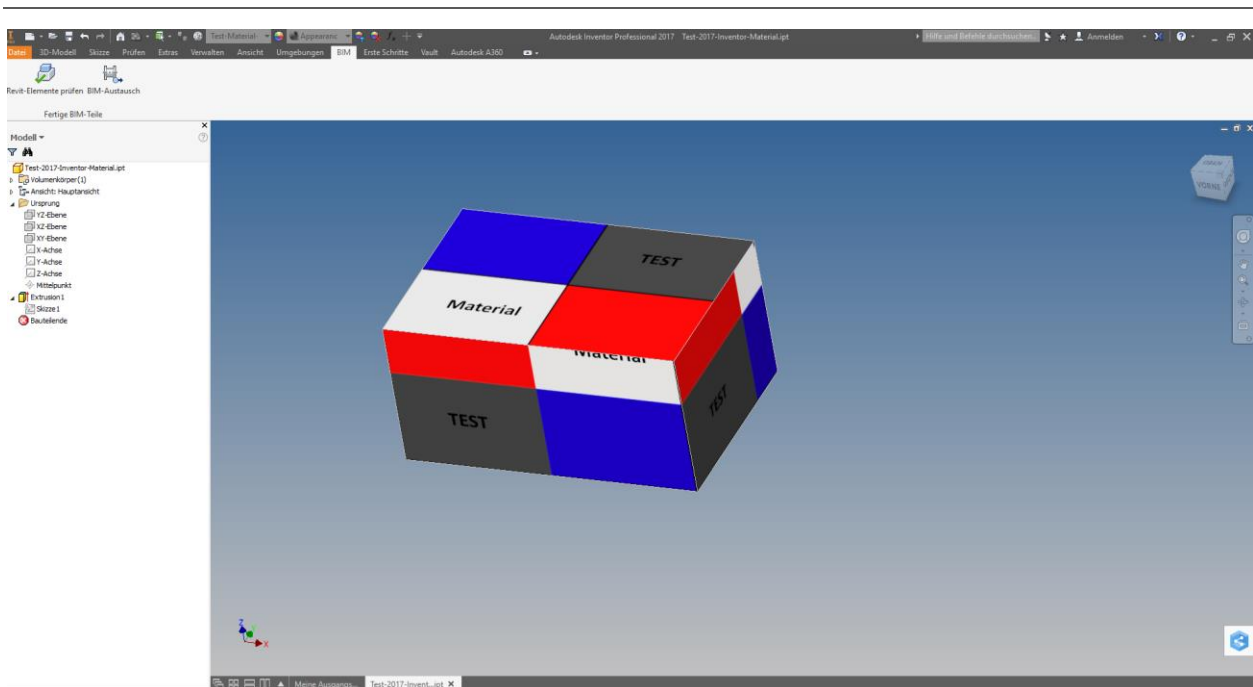

Add Material to the Part

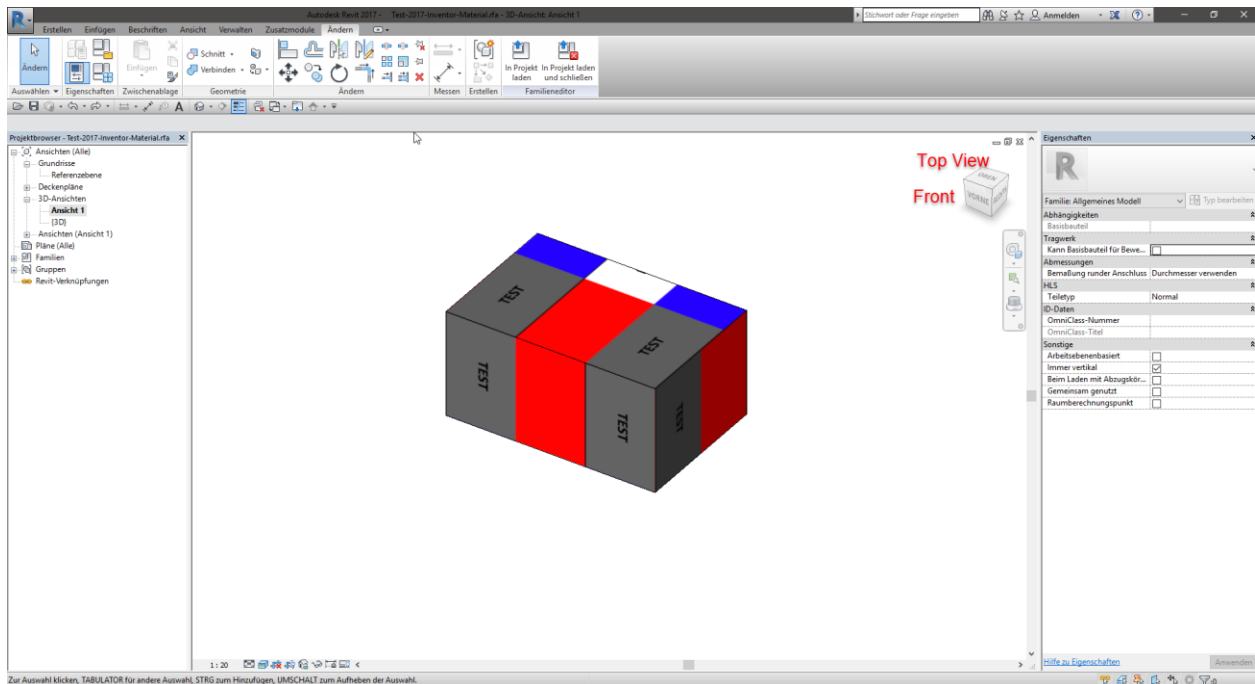

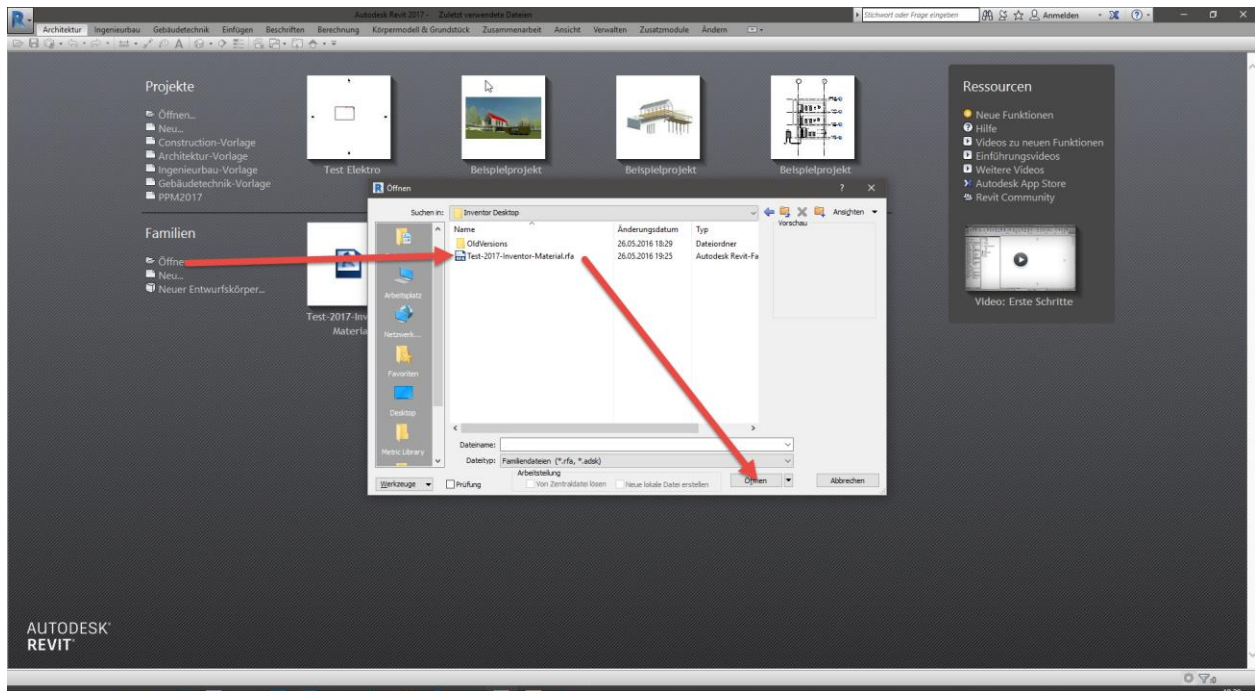

I wonder: Why the Material Origin is not similar to the Origin of the Sketch (or of the Part)?

## 5 BIM EXPORT AS \*.RFA

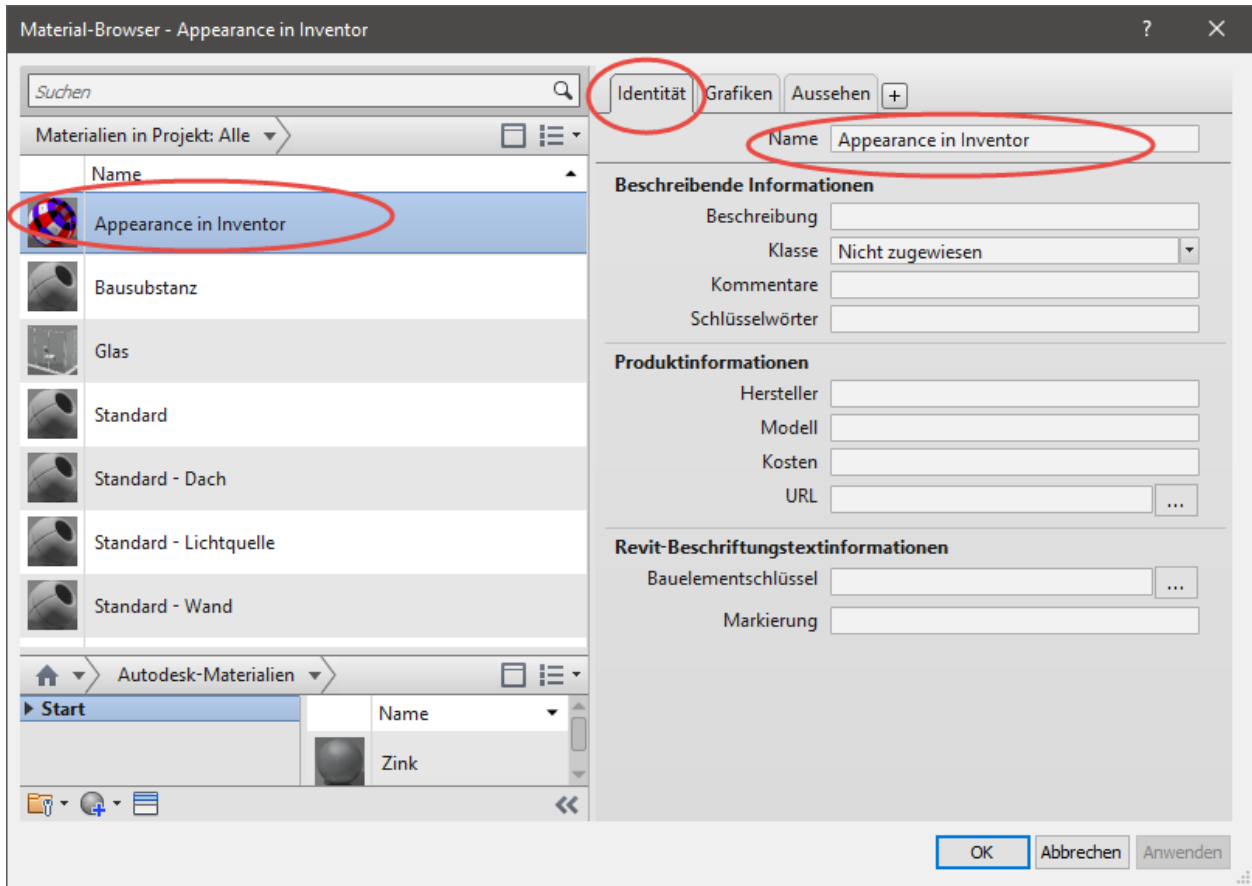

# 6 OPEN THE RFA-FILE WITH REVIT 2017

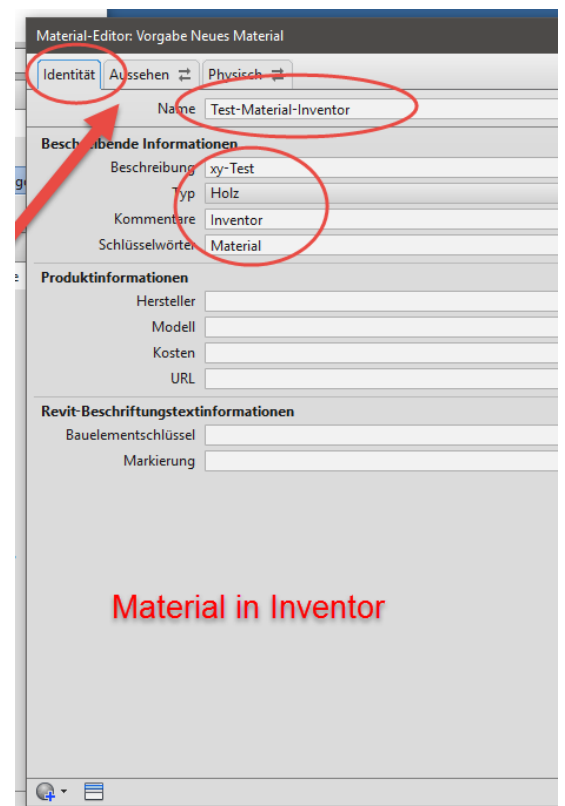

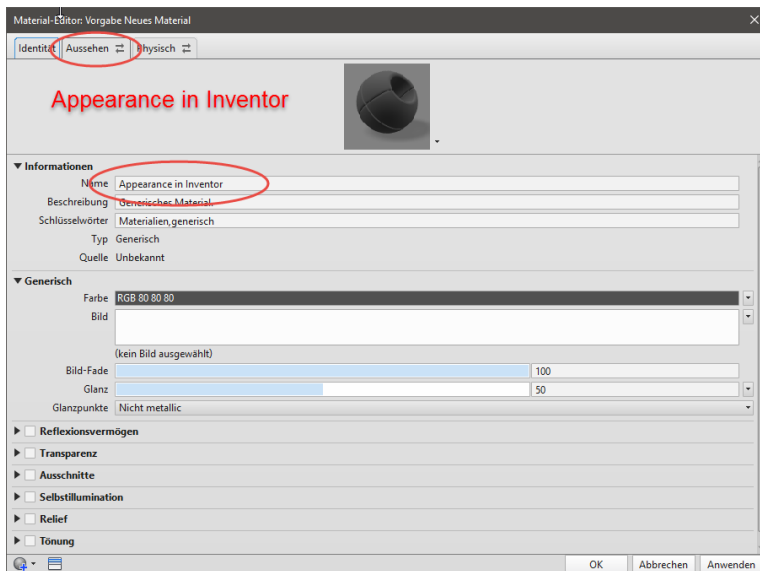

Material-Map is rotated by 90°

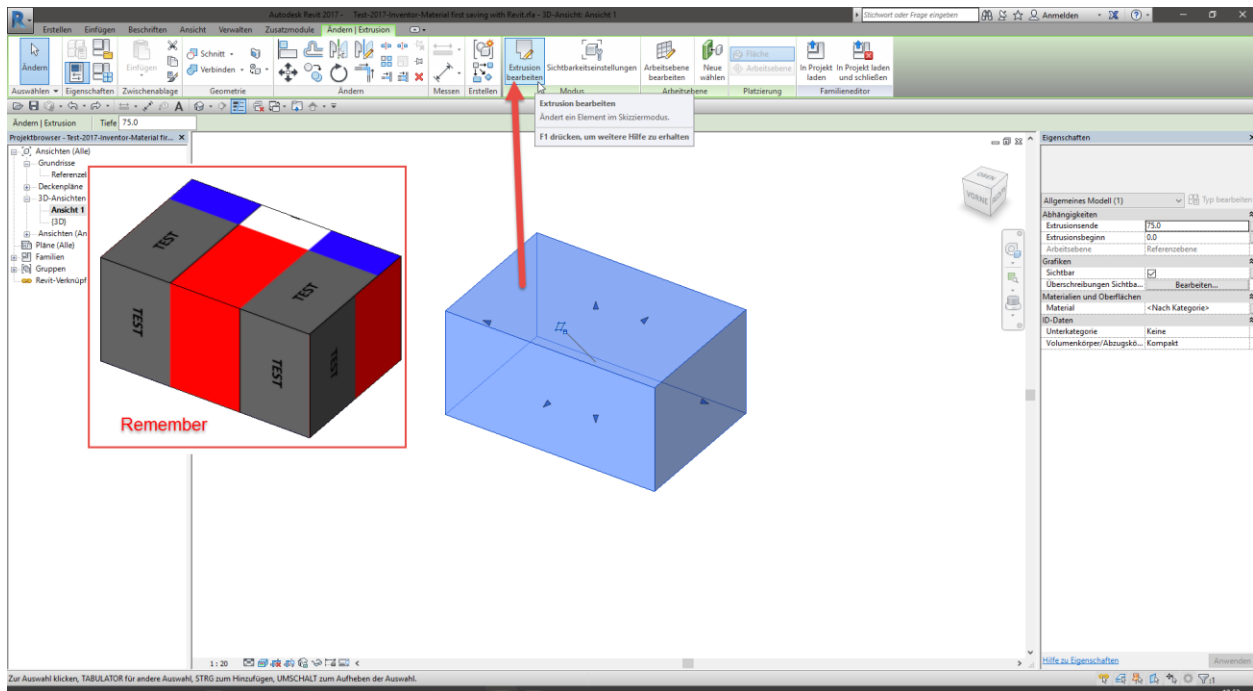

Wrong Material Name

(Remember: **This is the Name of the Appearance and not the Material Name given in Inventor!!!**)

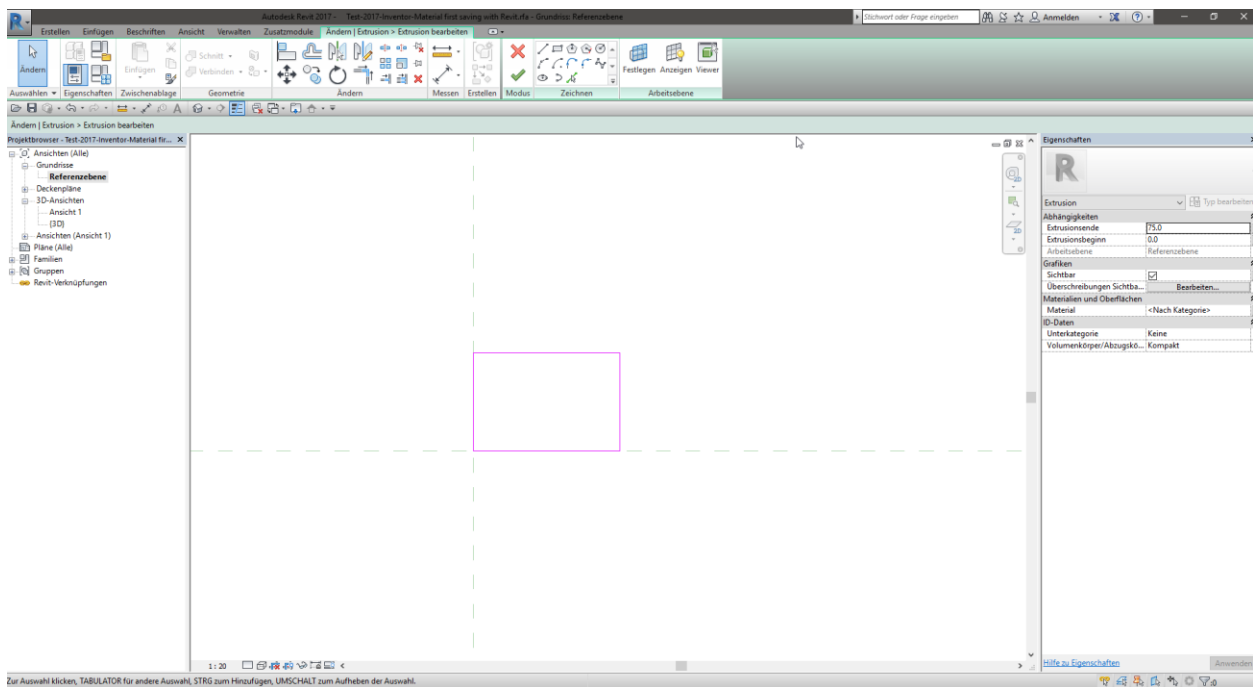

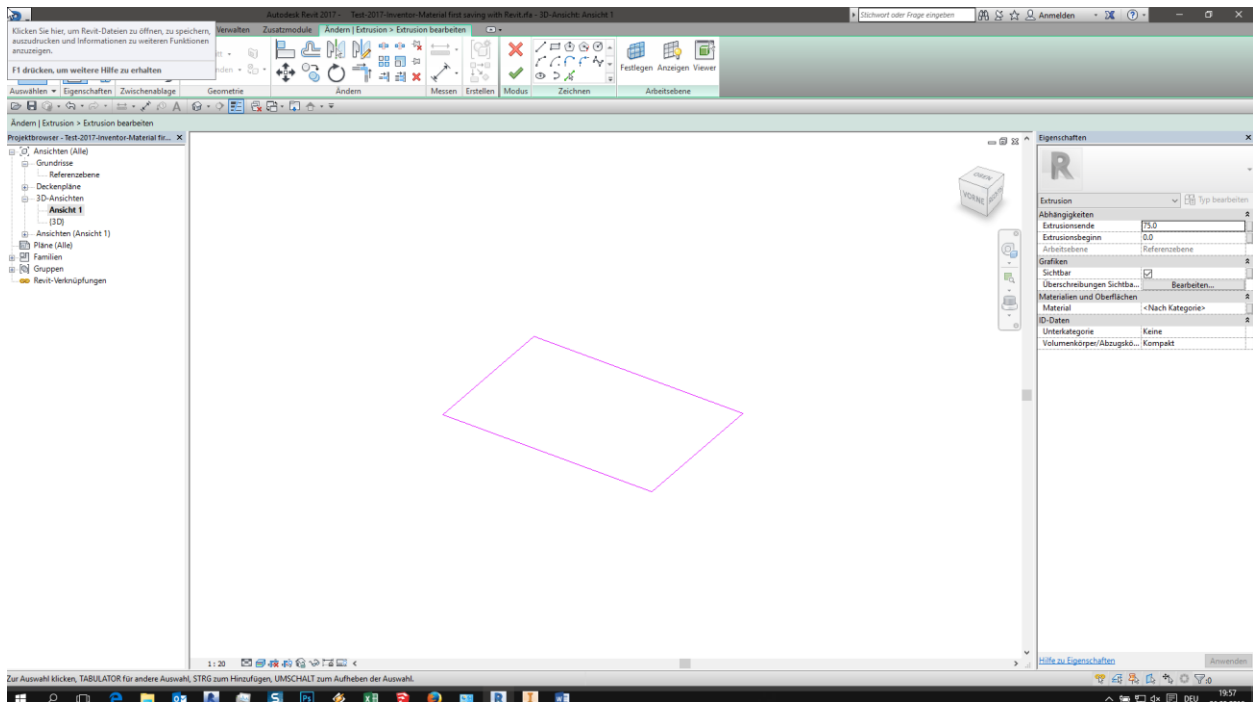

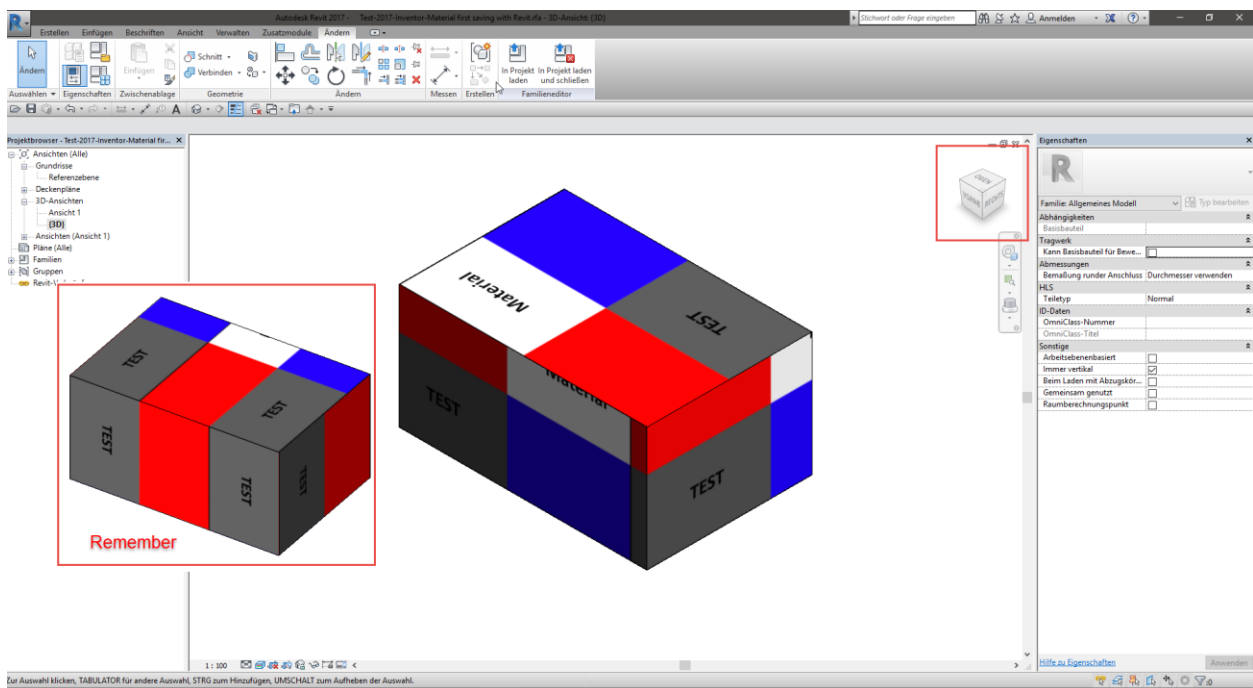

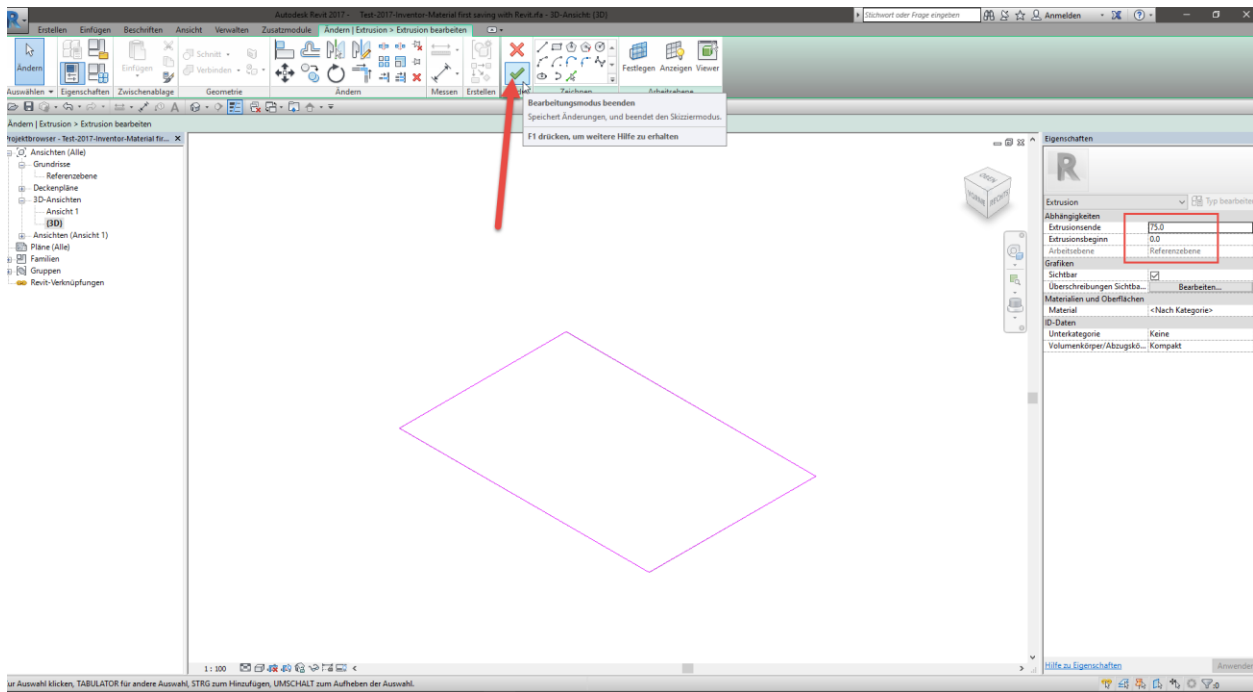

I wonder again: A Material is shown but no Material is link to the Extrusion or Body  
 Now I've saved this File as **Test-2017-Inventor-Material first saving with Revit.rfa**

I open the Extrusion

Sketch is on 0,0. That's fine ;)

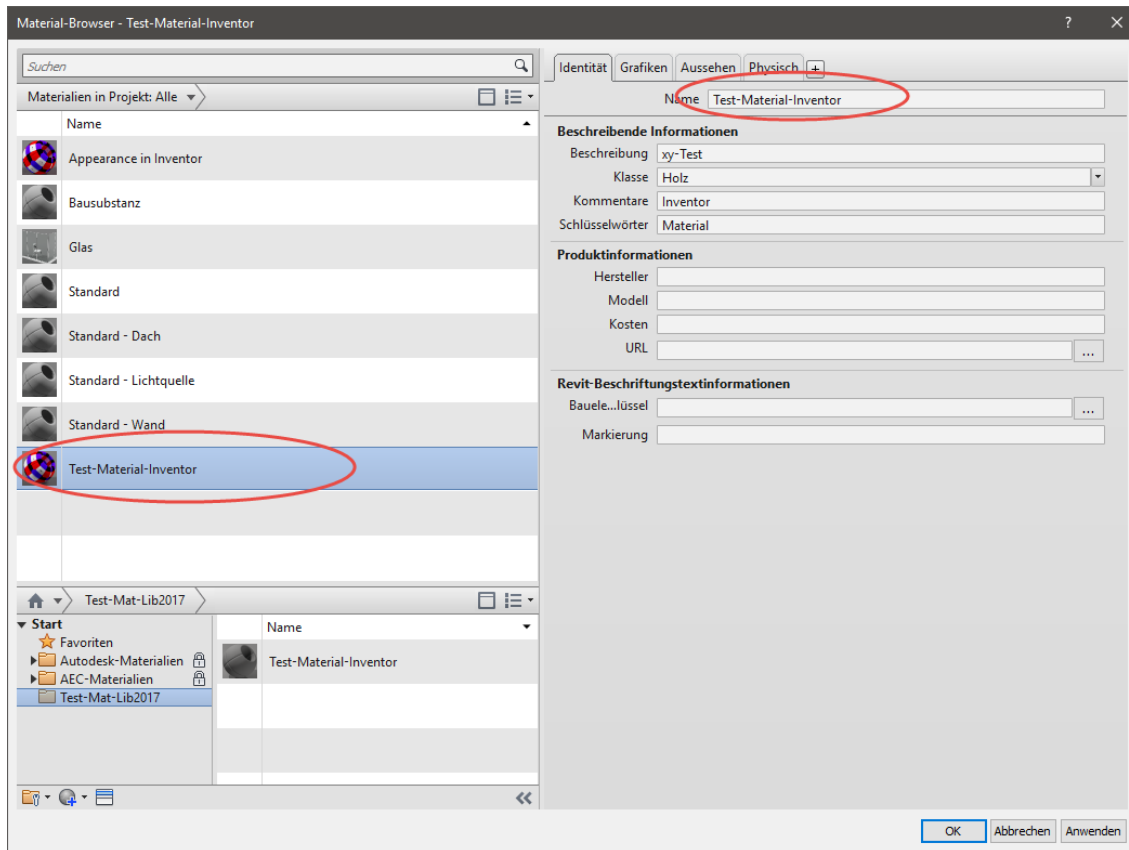

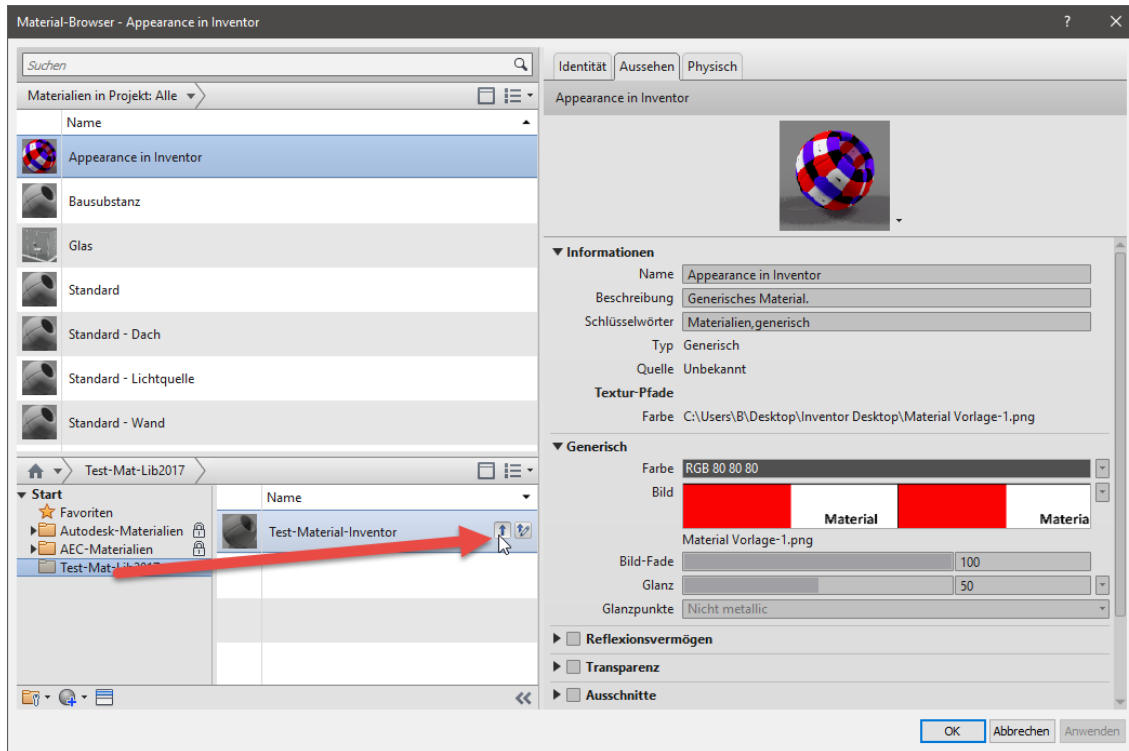

What's that ? The Map is rotated again. But in the wrong direction by 180°

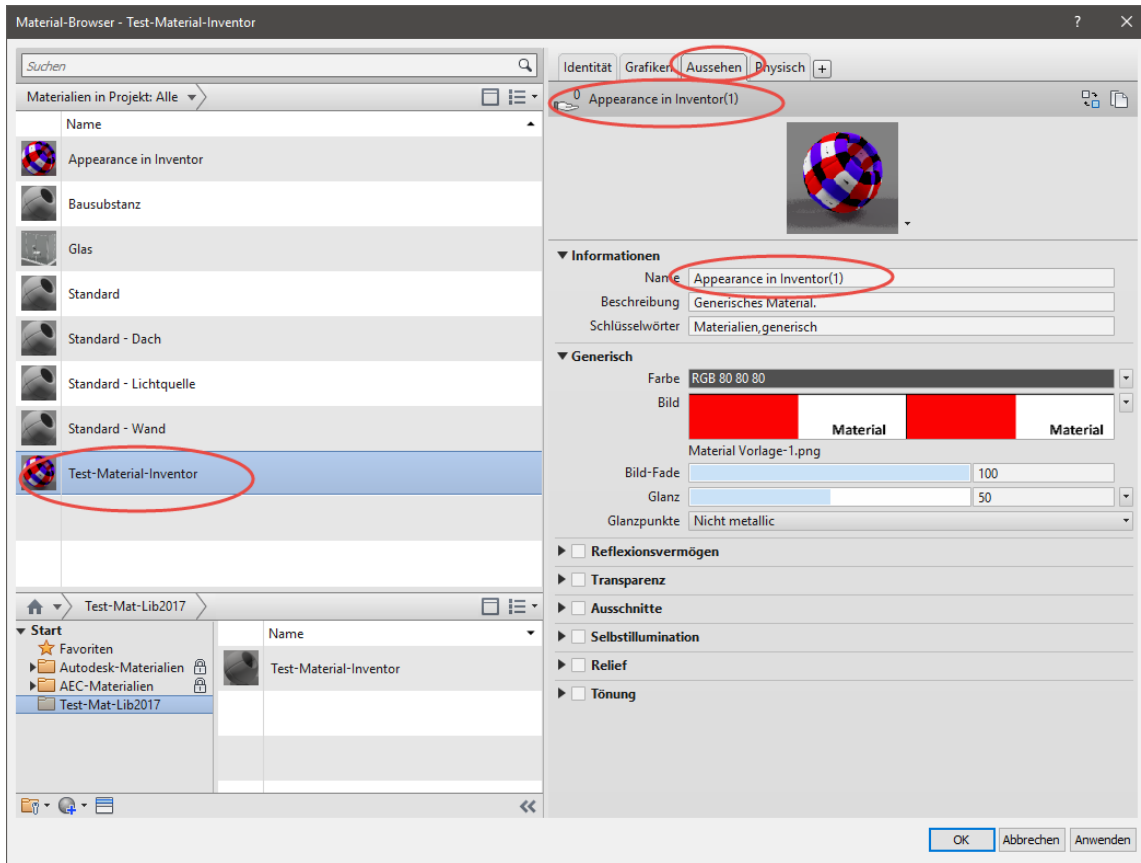

Now saved as **Test-2017-Inventor-Material second saving with Revit.rfa**

## 7 IMPORT MATERIAL FROM LIBRARY

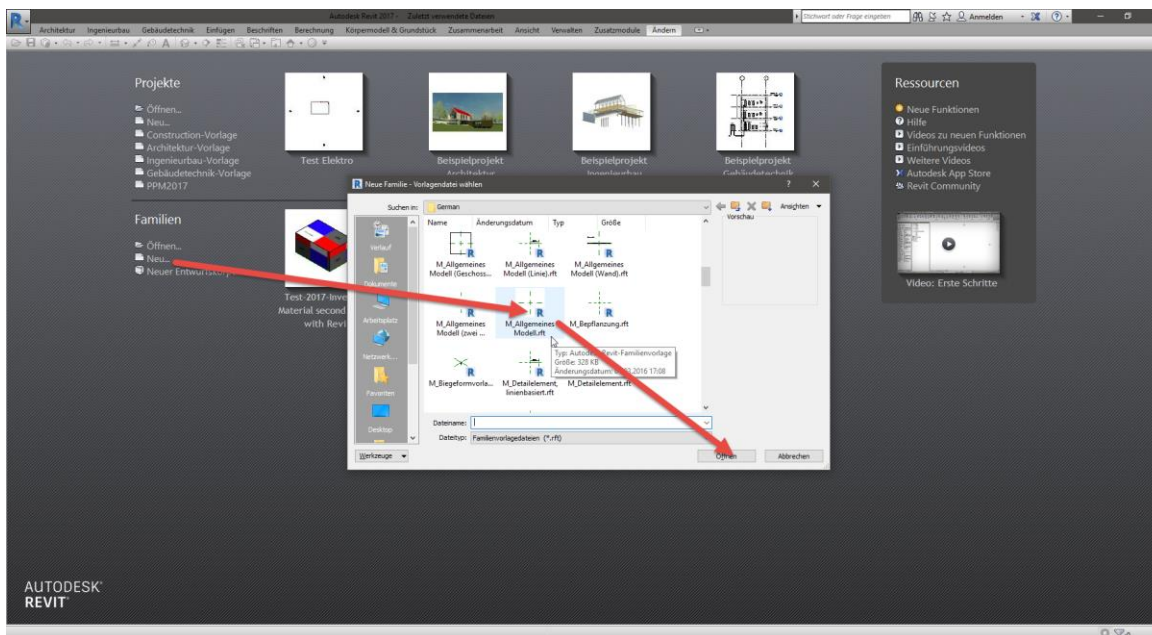

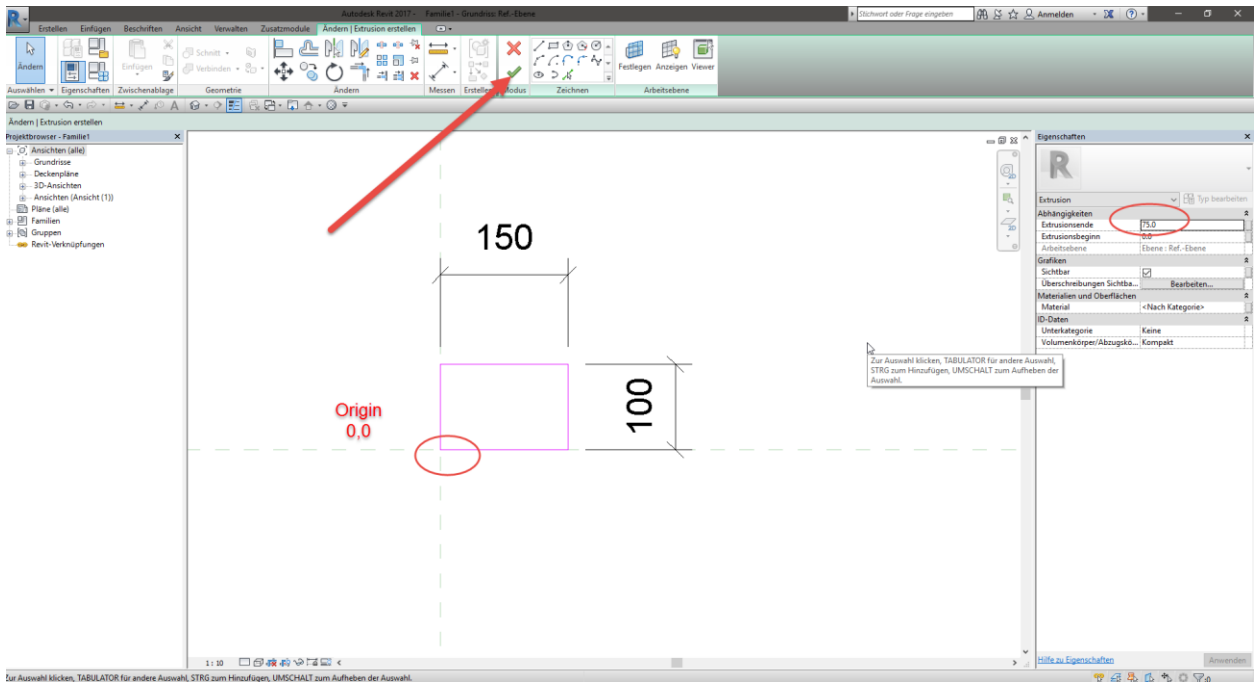

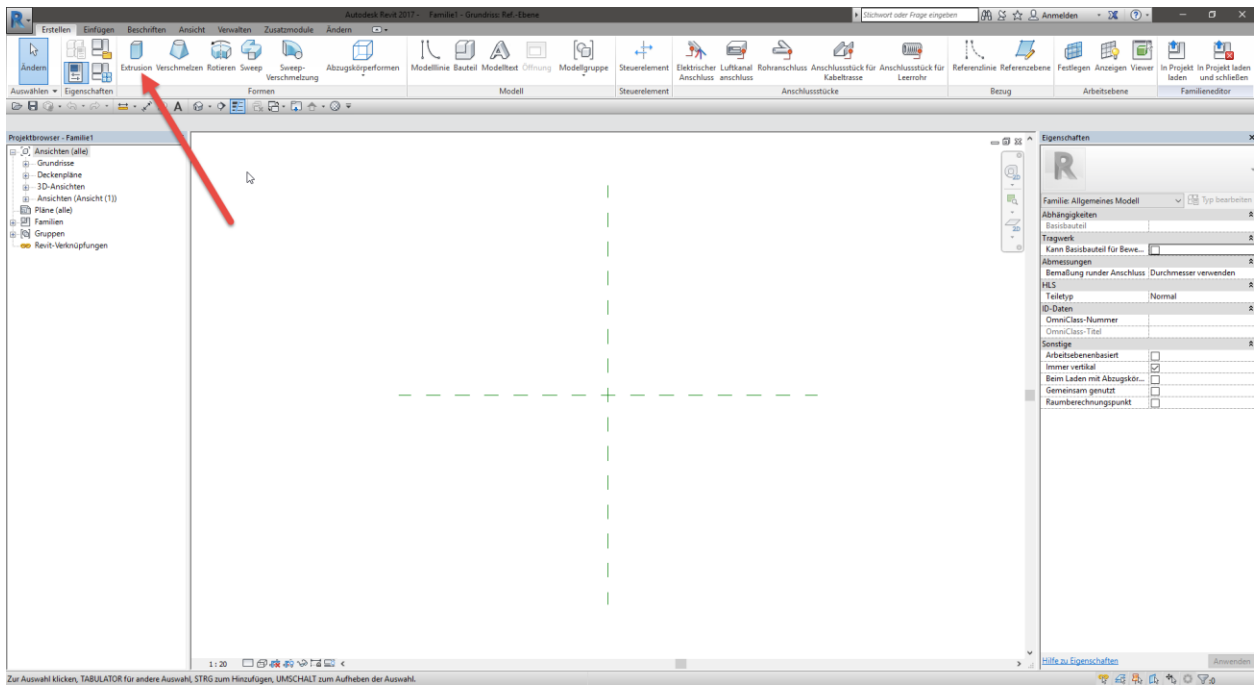

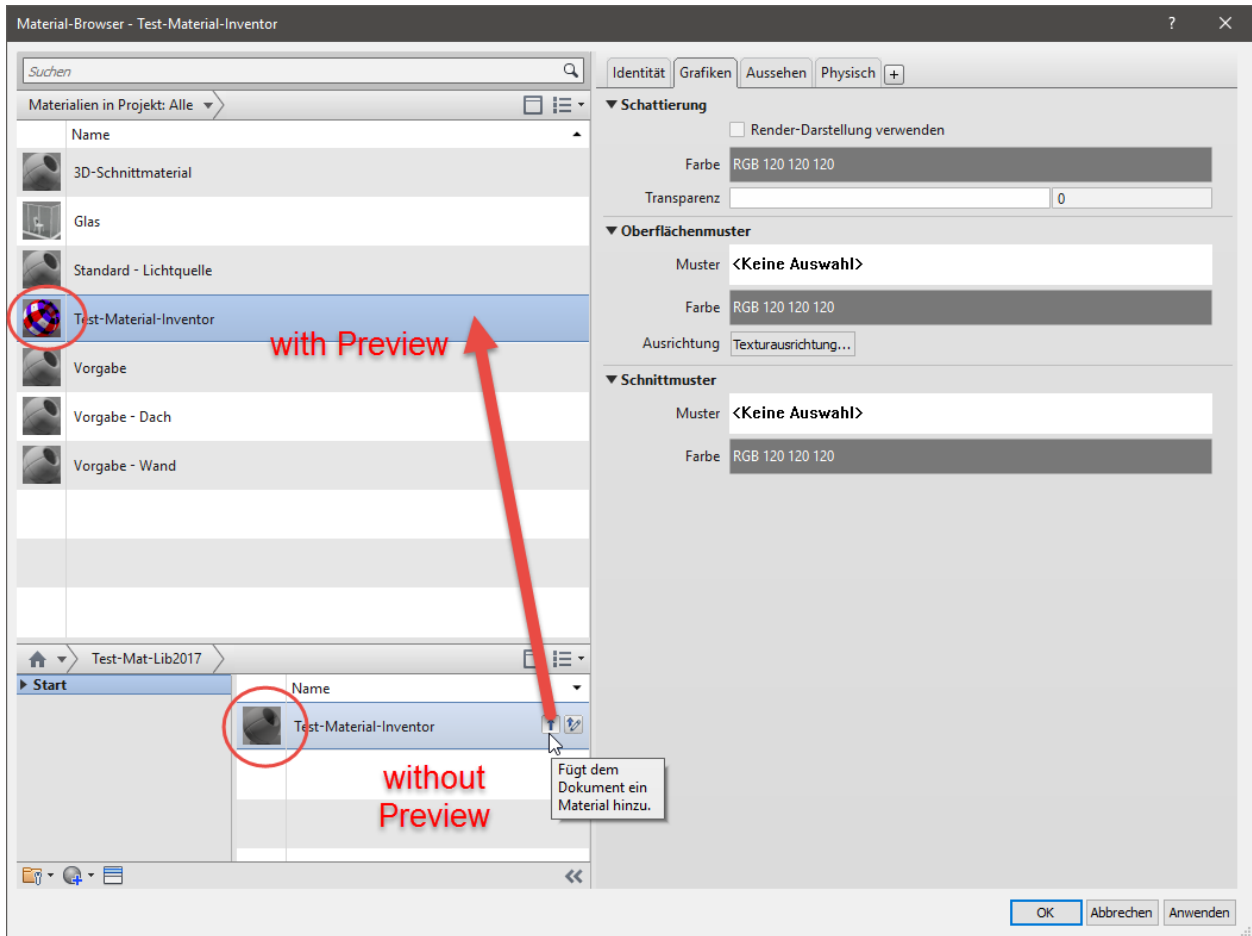

Now both Materials are placed in the browser. But the Appearance of the Inventor Material is duplicated !

## 8 NEW REVIT FAMILY WITH INVENTOR MATERIAL

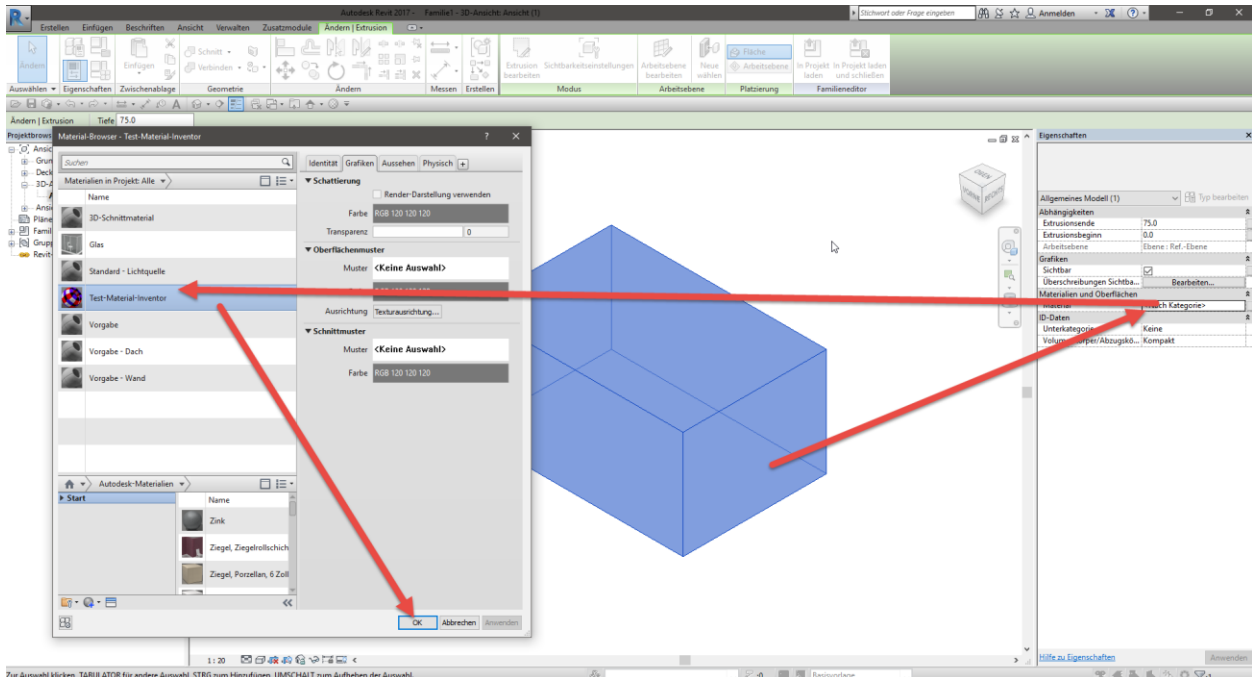

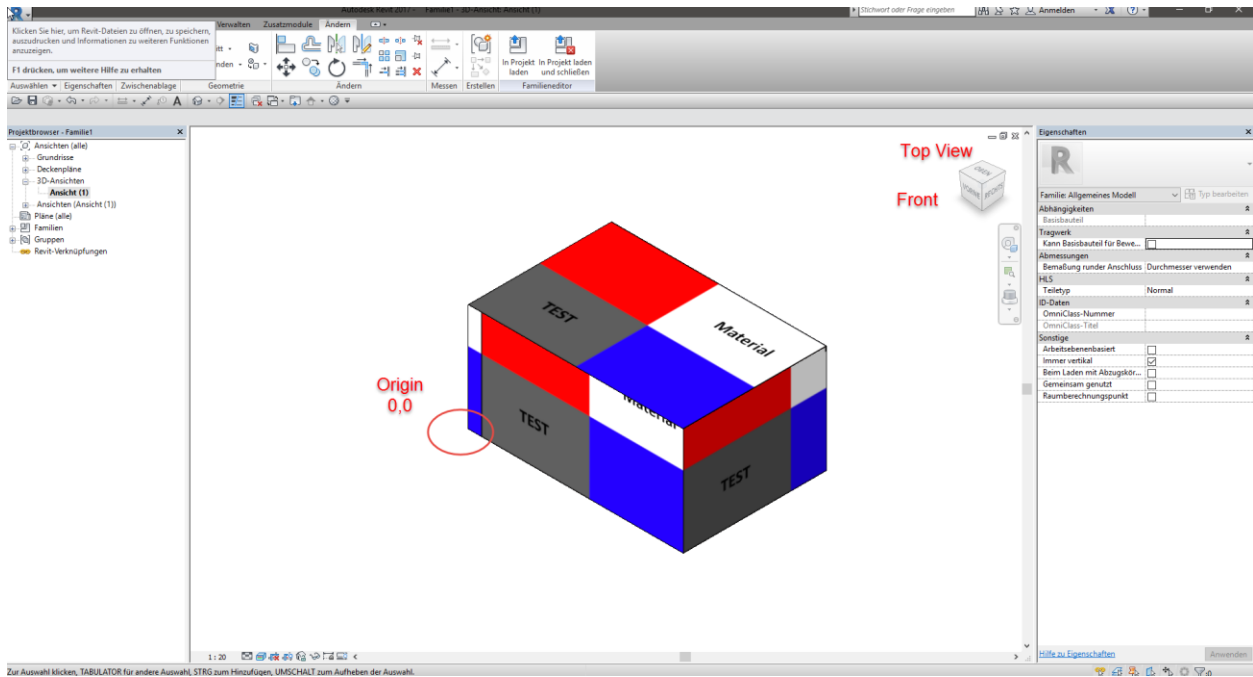

Import Material from Library.

**Note: In Library no Preview, in Project File Preview**

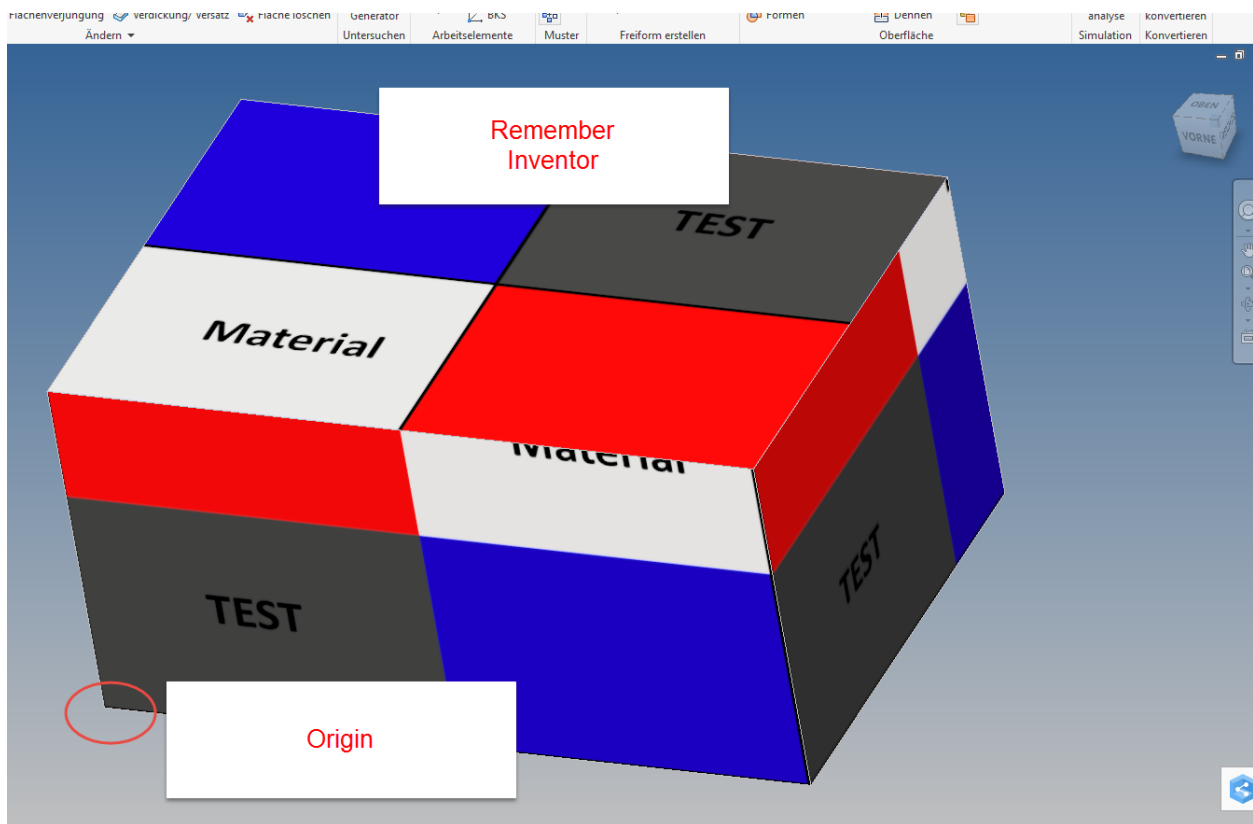

Add Material to Extrusion

Now in Top View the Material starts from the Origin of the Sketch.  
**(Saved as Test-2017-Inventor-Material new Family.rfa)**

Remember how its look like in Inventor:

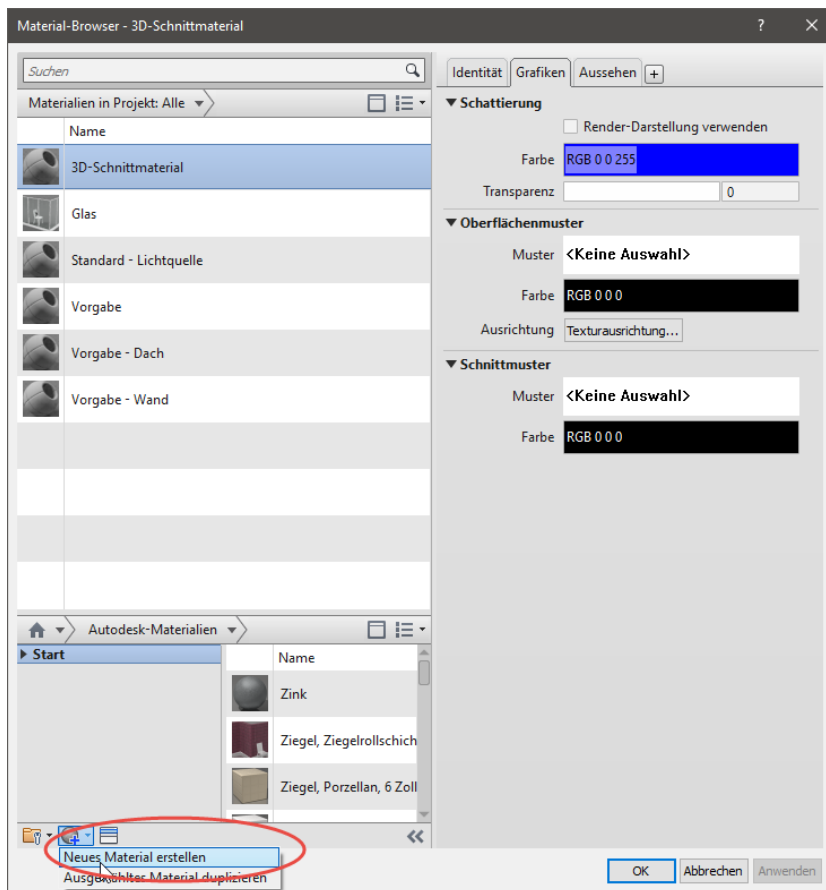

## 9 NEW MATERIAL IN REVIT

Create a new Material-Map in Photoshop

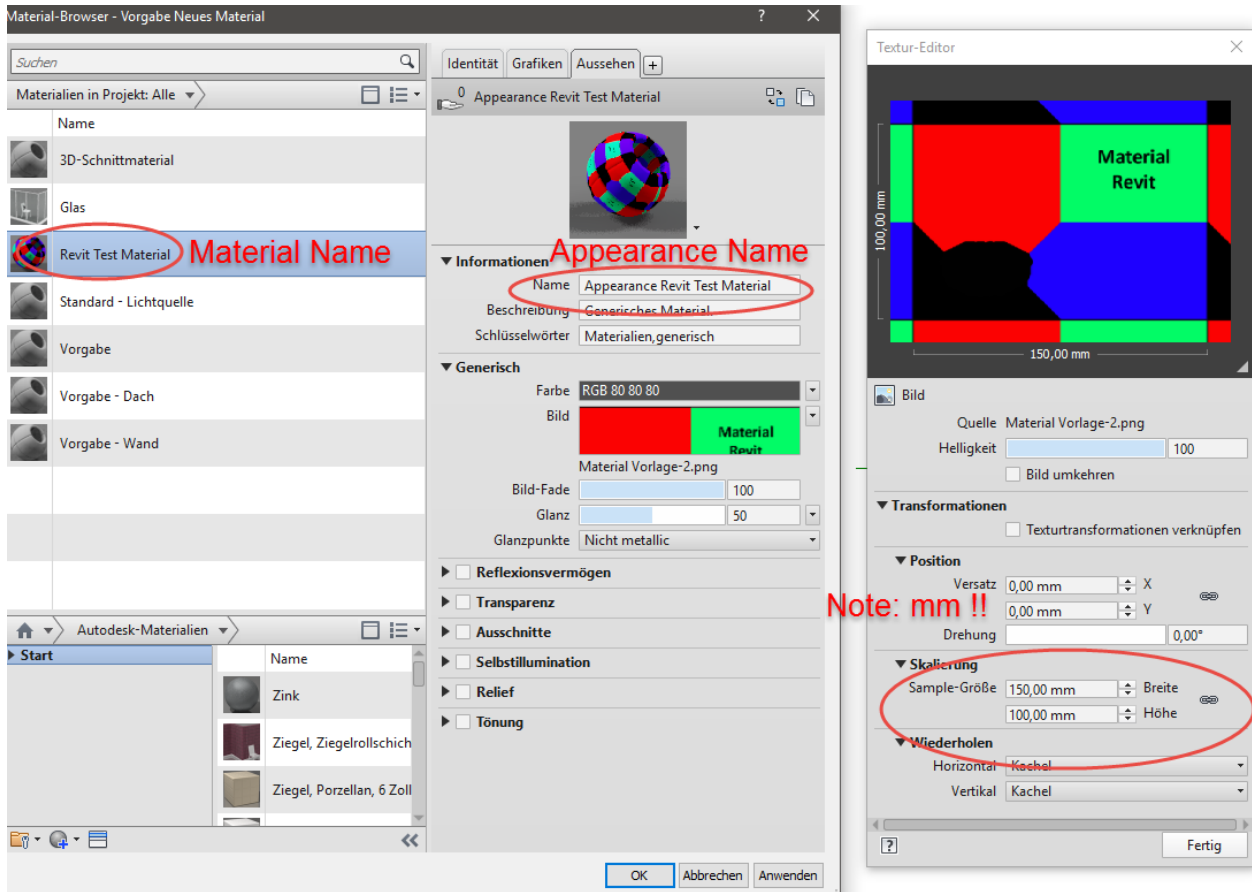

PNG 150x100mm, 150DPI Photoshop

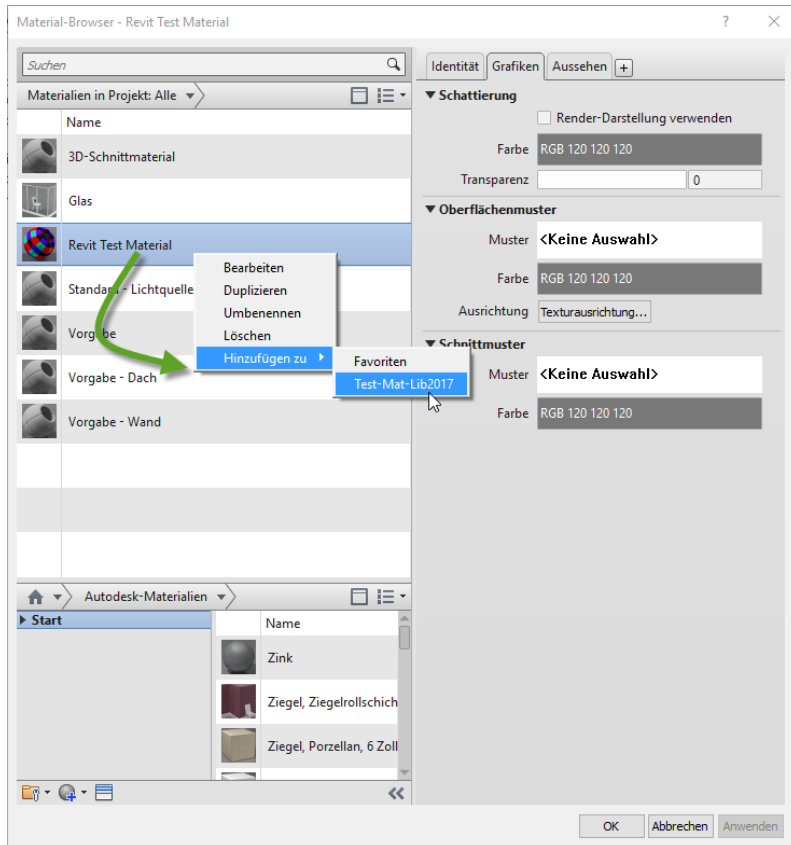

Start a new Family in Revit

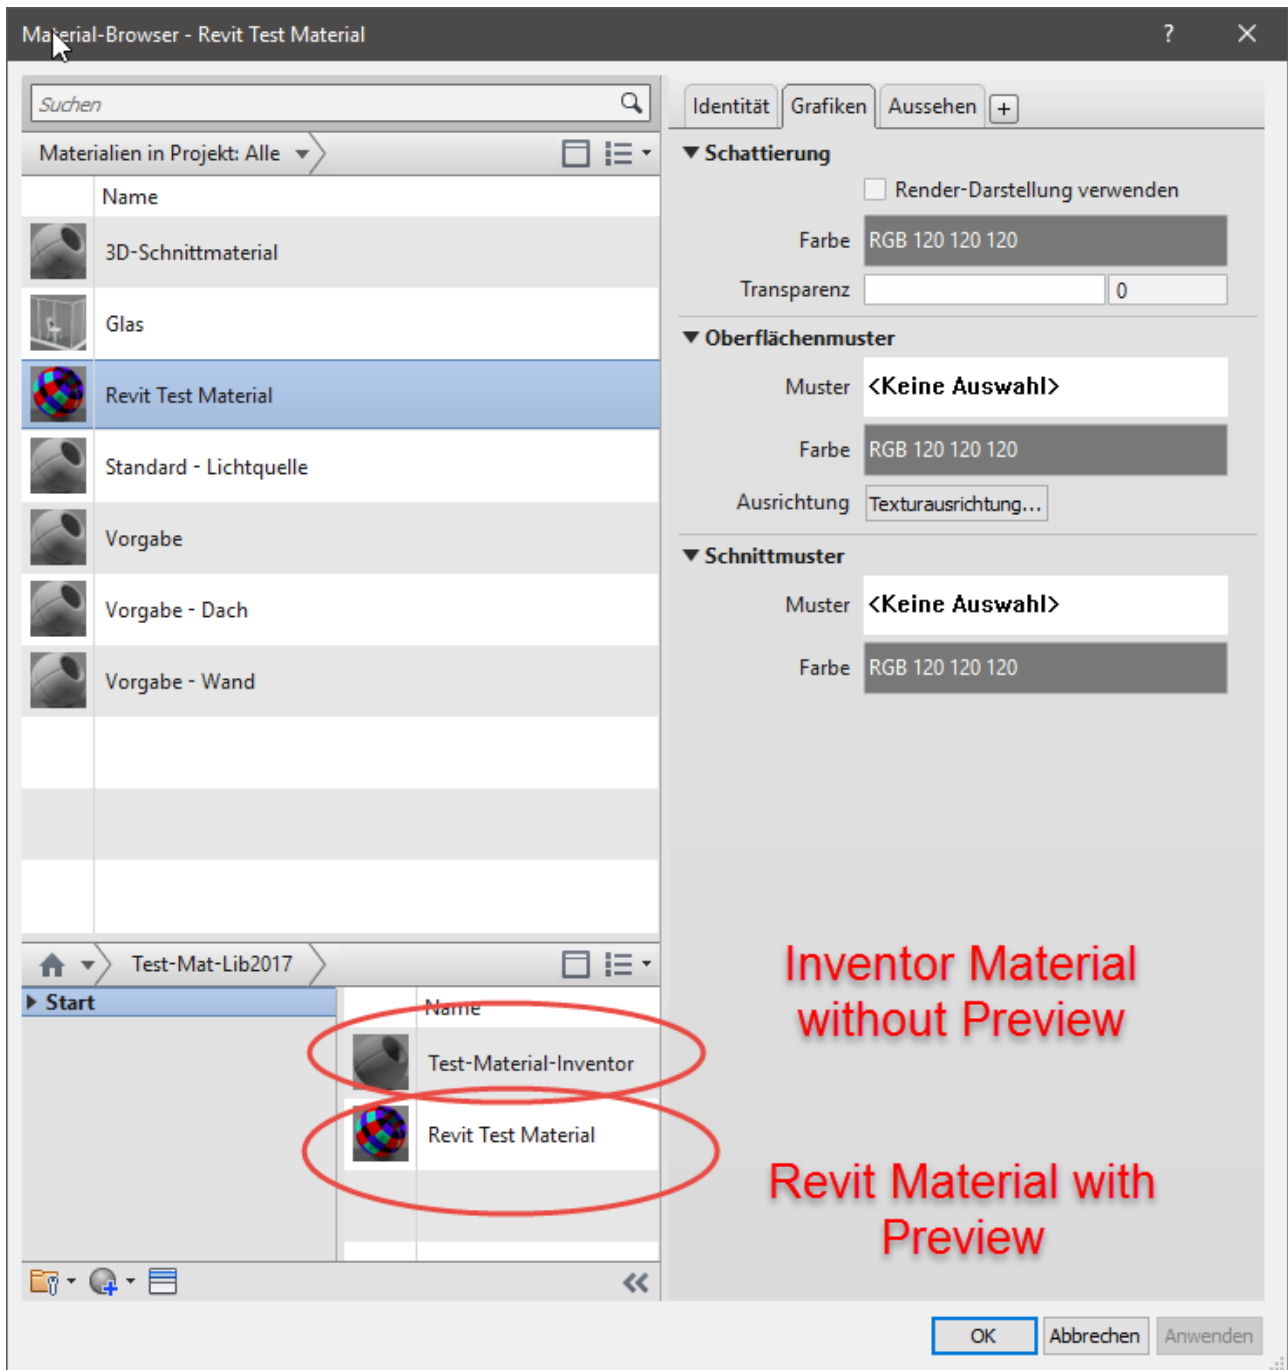

Create a new Material

**Note: Map-Size is mm instead of cm in Inventor !**

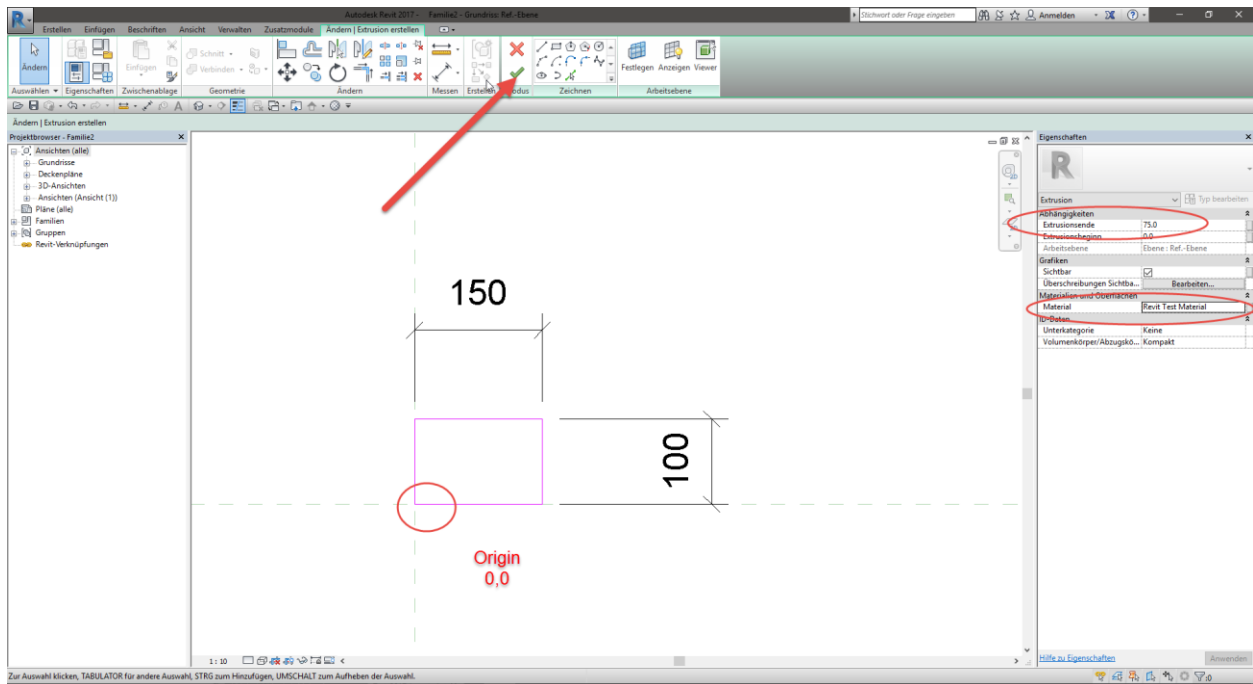

**Export to Mat-Library**

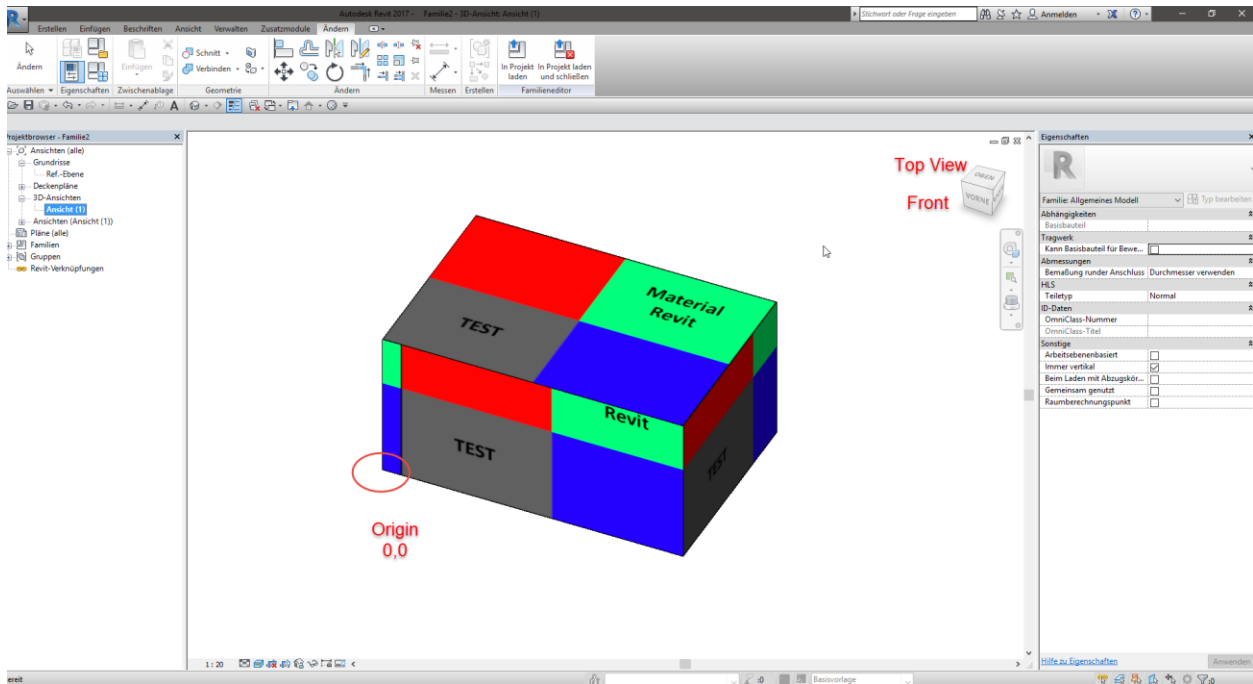

Inventor Material  
without Preview

Revit Material with  
Preview

# 10 FAMILY WITH NEW MATERIAL

Starting a Sketch for Extrusion on 0,0 on Reference Level View, add Material

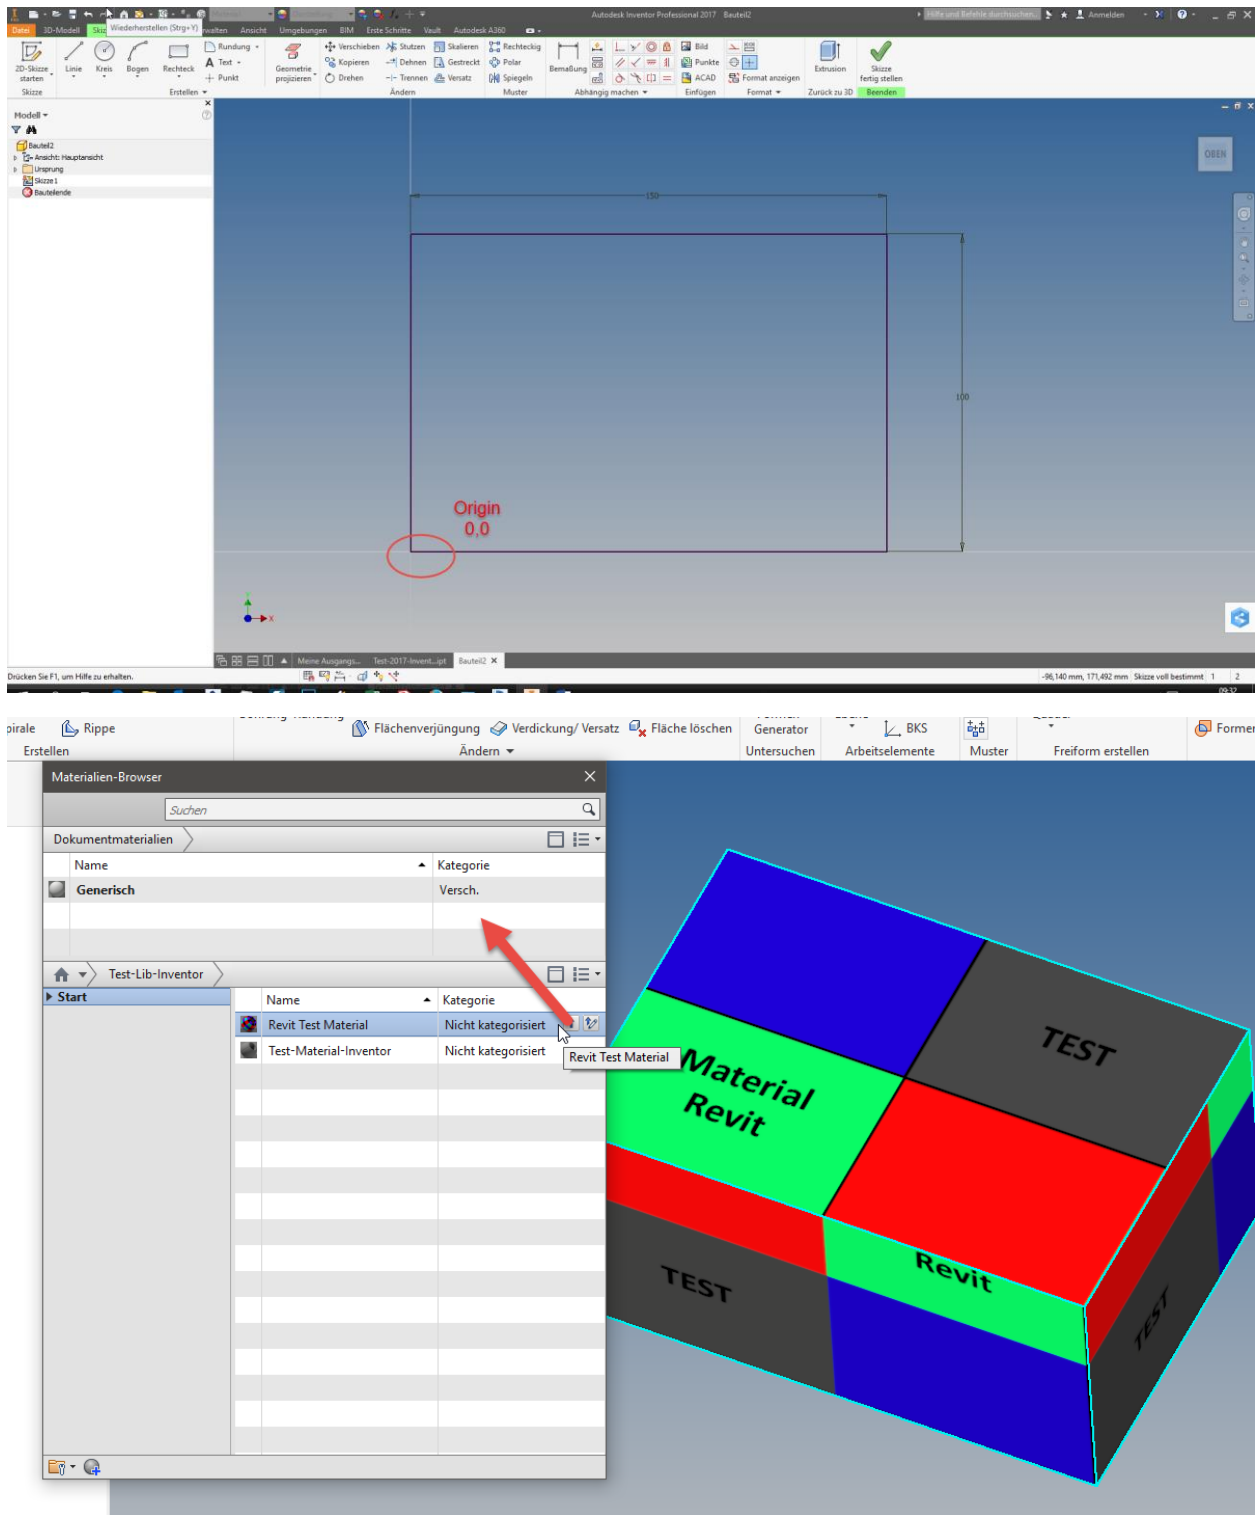

Everything is fine.

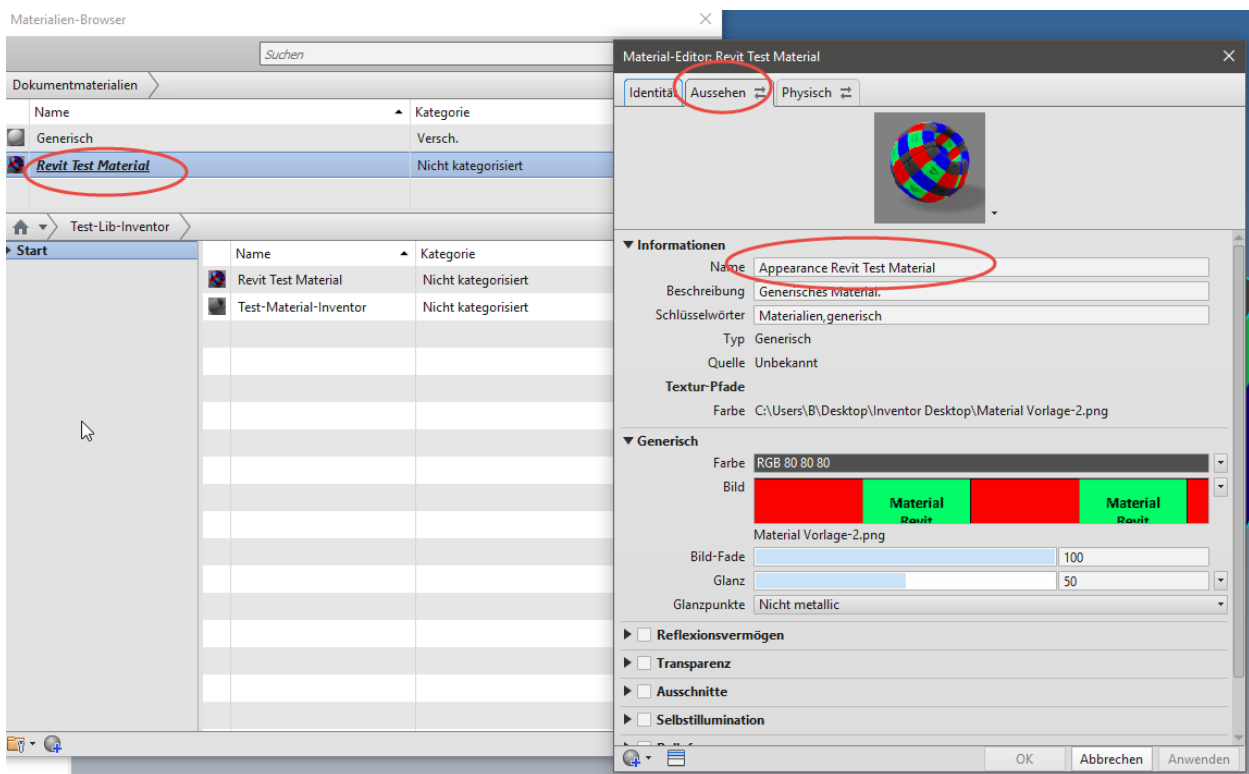

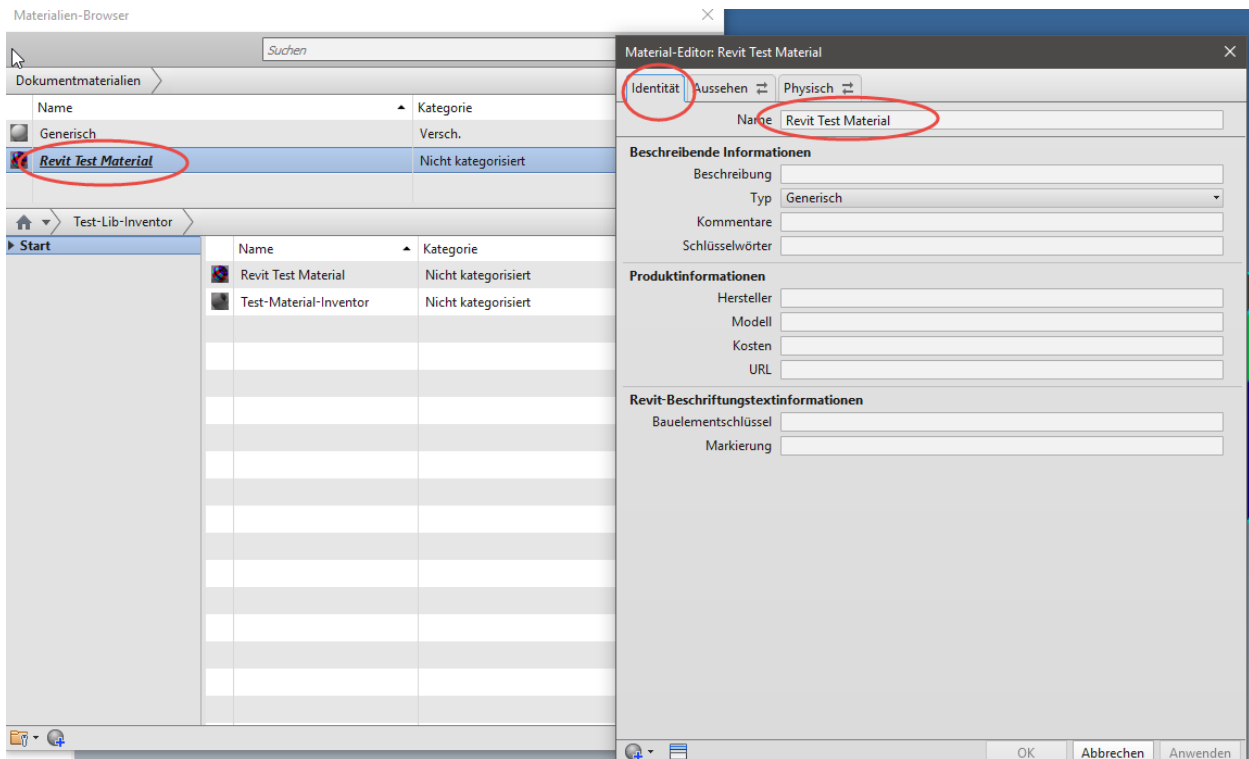

Saved as **Test-2017-Revit-Material.rfa**

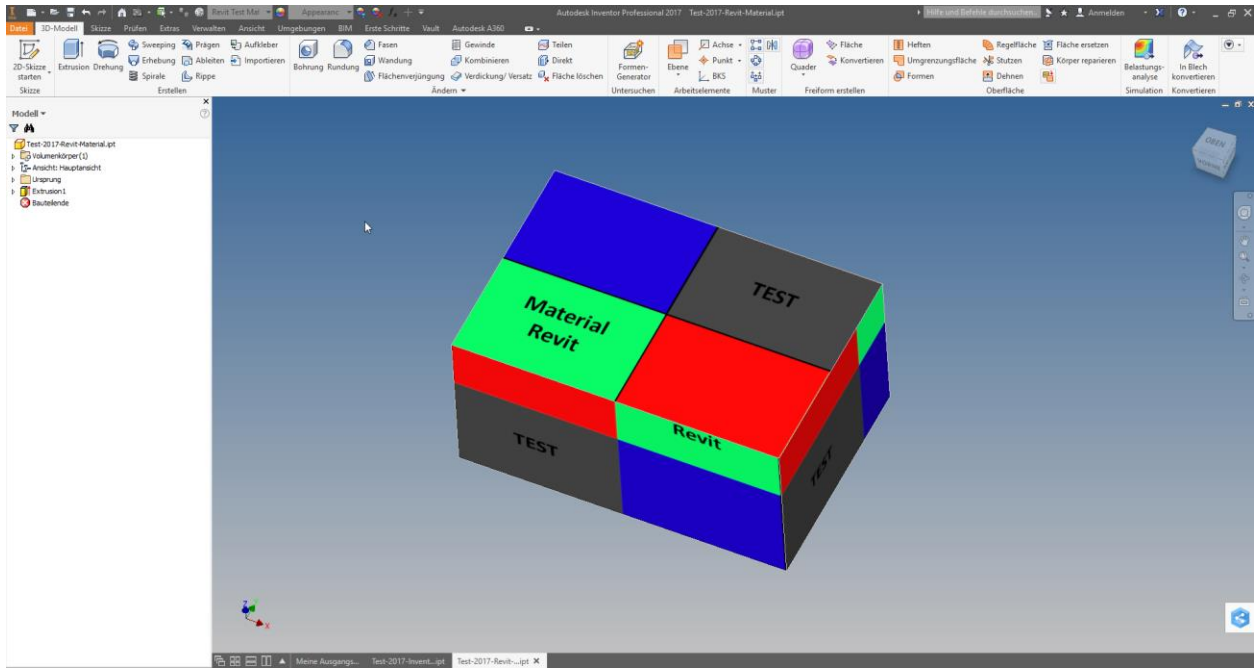

# 11 NEW INVENTOR PART WITH REVIT MATERIAL

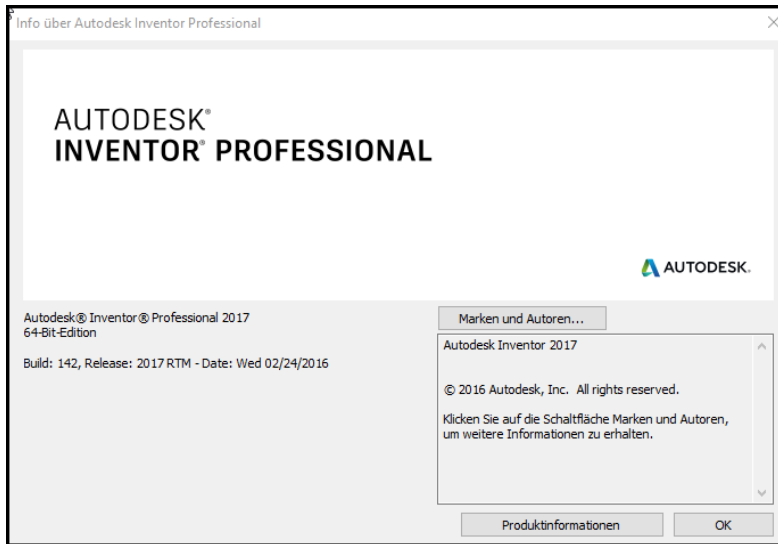

Add the Material to the Part, ignore “No physical Material”

Saved as **Test-2017-Revit-Material.ipt**

# 12 SYSTEM INFORMATION

## Windows-Edition

Windows 10 Home

© 2015 Microsoft Corporation. Alle Rechte vorbehalten.

## System

Prozessor: Intel(R) Core(TM) i7-3537U CPU @ 2.00GHz 2.50 GHz  
Installierter Arbeitsspeicher 8,00 GB (7,88 GB verwendbar)  
(RAM):  
Systemtyp: 64-Bit-Betriebssystem, x64-basierter Prozessor  
Stift- und Toucheingabe: Für diese Anzeige ist keine Stift- oder Toucheingabe verfügbar.
