

Feinmechaniker-Ausbildung Ende der 70-er Jahre.

A photograph of a metal L-shaped bracket, likely made of steel, resting on a light-colored, textured surface. The bracket has a vertical leg on the left and a horizontal leg extending to the right. At the corner where the two legs meet, there are five circular holes: two on the vertical leg and three on the horizontal leg, arranged in a pattern that suggests they are for mounting or fastening. The metal surface shows some signs of wear and discoloration.
