# custom_dirs.dat: Directories to search for Unigraphics customizations
#
# Copyright (c) 1999 Unigraphics Solutions, Incorporated
#       Unpublished - All rights reserved
#
#####
#
# This file is used to specify directories which will be searched for
# menu files, toolbar files, dialog files or UDO libraries. The directories
# added here may or may not exist, to allow the same file to be used at
# multiple sites. When Unigraphics starts up, it will check each entry, if
# the directory does not exist, the line will be discarded as if it was a
# comment. Comments are allowed, and must start with a # in column one.
#
# Directories must be listed one per line, with nothing else on the line. The
# directory may include environment variables, by specifying $variable. If
# a $ is needed in a directory, it may be specified using $$, e.g.
# /users/my$$ would be the directory /users/my$. The file may be made to
# work on UNIX or WNT, on WNT any / characters will be replaced by \.
#
# A #include construct is supported to include other files, to make it easier
# for individual users to customize their runtime environment. Finally the
# location of this file is controlled by the environment variable
# $UGII_CUSTOM_DIRECTORY_FILE which by default points to
# $UGII_DEFAULT_MENU_DIR/custom_dirs.dat
#
# Customers should feel free to edit this file.
