Title	How to Make the Crosshatching of a Cross Section Conform to the Model's Material						
Product	Pro/ENGINEER	Module	DETAIL	TPI ID	103353	Created	27-JUN-00
Workstation				Reported In Release	2001	Reported In Datecode	
SPR	None			Resolved In Release		Resolved In Datecode	
Description ----- How to make the style of a cross section automatically be the same as the material. Alternate Technique ----- See Resolution below. Resolution ----- When a new cross section is created in a part or an assembly, if a part that the section cuts through has a defined material name, say "steel", and there is a saved xhatching style with name steel.xch, the xhatching style in the part will be assigned to steel.xch. The config.pro option "pro_crosshatch_dir" should be set if there are user defined cross hatching files.
